SUBJECT: 1984 AMC MMT Program Plan

SEE DISTRIBUTION (Appendix C)

1. Reference AR 700-90, Army Industrial Preparedness Program, para 3-4i(1), dated 15 March 1982.
2. This planning document, developed in accordance with the referenced regulation, describes the Army Materiel Command (AMC) Manufacturing Methods and Technology (MMT) Program for the period FY 84-88. This plan was completed by amending the 1983 Program Plan to take into account both programming actions which have occurred over the past year (i.e., FY 84 approvals, FY 85 apportionment submission, and FY 86 budget submission) and other command inputs reflecting FY 87 and 88 thrusts.
3. Because of the dynamic nature of military material requirements and the constant change in technology, the inclusion of a project in this plan is not a guarantee of funding. However, the plan does indicate the current technology needs and interests of the AMC community.
4. Additional copies of this document may be obtained by writing the Defense Technical Information Center, Attn: DTIC-TSR-1, Cameron Station, Alexandria, VA, 22314.

FOREWORD

This document presents information for the AMC Manufacturing Methods and Technology (MMT) Program for Fiscal Years 1984-1988. The projects and funding levels for the out-years are for planning purposes only and will change based on technological developments and revisions in program requirements. Since total funding for these planned projects exceeds the projected funds for the Army's MMT Program, some projects will not be funded or may be slipped to later fiscal years. HQ, AMC and its sub-commands and centers have the authority to reprogram funds to projects with higher priority, thereby affording the flexibility to accommodate new opportunities as they arise.

I. INTRODUCTION

The MMT Program Plan

The MMT Program Plan, CY 1984, provides within a single source a summary of current and near-term efforts included in the Army Materiel Command (AMC) MMT Program. Since weapons systems requirements and the technology for these systems are constantly changing, inclusion in the Program Plan is not a guarantee that an individual project will be funded. However, the Plan does serve as an indicator of the areas towards which AMC's resources will be directed and the magnitude of the Army's commitment to this program.

Organization of the MMT Program Plan

This document contains a "Command Plan" for each AMC major subordinate command or other AMC activity that sponsors MMT projects during the fiscal years 1984-88 (FY 84-88). Each plan is introduced by a command summary that describes organizational responsibilities and major areas of technological endeavor. Following this summary is a list of all projects under the command's sponsorship. Projects are grouped according to broad "Categories" and then arranged into subgroups by "Components." The category/component descriptors are product related although a few describe manufacturing processes. Individual projects are identified by the four digit project number and title. Project information includes: a brief description of the manufacturing problem addressed by the project; the proposed solution; and, the proposed funding requirements.

In December 1983, questionnaires were distributed to the 600 industry recipients of the 1983 MMT Program Plan. This endeavor to solicit a frank reaction to the Plan had dual purposes. First, it measured the general effectiveness of the 1983 edition. Second, it identified industry's requirements for information. Over 200 questionnaires were returned and most of them contained suggestions for improving the Plan. The response prompted a reorganization of this year's edition and the expansion of the "Industry Guide." The industry feedback was appreciated. The criticisms were constructive in nature; and, many laudatory remarks indicated the Plan's value to potential contractors.

The MMT Program

The Manufacturing Methods and Technology (MMT) Program serves the US Army Materiel Command as a bridge between research and development and production. The program's primary aim is to reduce the cost of weapons system acquisition by improving the efficiency of manufacturing processes and by implementing new technology. Although cost reduction is a primary concern, the emphasis is also directed toward efforts reducing air and water pollution, increasing safety, conserving energy, reducing dependency on critical material, improving producibility and increasing productivity.

Need for MMT

The MMT Program is a major DOD tool for improving productivity and reducing end product and spare parts costs. Although the United States still leads in productivity, countries such as Japan and West Germany are rapidly closing the gap. With the real dollars available for defense production shrinking, the Army must achieve productivity growth to get more for each dollar invested. The following excerpts illustrate the emphasis being given to the MMT Program.

Excerpt from the "Report of the Secretary of Defense Caspar W. Weinberger to the Congress," dated 1 February 1984:

"The Manufacturing Technology Program is a broad-based program to improve the productivity and responsiveness of the defense industrial base by investing in advanced technologies for the production of DOD materiel. This program has been in existence for over 20 years, and we intend to continue to give it priority attention because of its demonstrated high-payoff record and its ability to improve industrial productivity on a broad national basis."

Excerpt from "The FY 85 Department of Defense Program for Research, Development and Acquisition" by Richard D. DeLauer, Under Secretary of Defense for Research and Engineering to the 98th Congress, Second Session, 1984:

"This program will continue to receive priority attention because of its demonstrated high-payoff record in establishing new "factory floor" manufacturing processes which reduce lead times and their attendant costs and improve productivity on a very broad national base. Recent accomplishments include: (a) a new process to manufacture high purity Gallium Arsenide material used in integrated circuits in guidance control systems for several missile systems. Actual savings to date are \$4.8 Million after an investment of \$528 Thousand. Additional savings are expected to be another \$6.6 Million; (b) a new process of electronically inspecting aircraft fastener holes is ten times faster than manual methods and is expected to provide \$20 Million in savings on the C-5 wing modification alone."

Excerpts from a statement by Ms. Mary Ann Gilleece, Deputy Under Secretary of Defense for Acquisition Management, Office of the Under Secretary of Defense for Research and Engineering before the Subcommittee on Seapower and Strategic and Critical Materials of the Committee on Armed Services, House of Representatives, 8 March 1984:

"....MANTECH projects are expected to result in a first case, "factory floor" application of productivity enhancing technologies. The investments are viewed as "seed money" necessary to reduce the technical and fiscal risk of follow-on implementation. They actually demonstrate that the technology is effective and should be considered by others throughout the industrial base. Investments which simply result in a report which may or may not be used are discouraged. This strategy has paid off over the years. Estimates of MANTECH payoff vary from 3:1 to 5:1 depending on the basis of the estimate.

"Most MANTECH projects are executed by the private sector. The exceptions occur mainly in such areas as ammunition or large caliber weapons where the DOD owns the industrial base....

"MANTECH has been predominantly funded from 12 separate procurement accounts for about 20 years. However, during the review of the FY 84 budget, the Congress provided guidance that the program should be funded from RDT&E appropriation. DOD disagreed with this view because MANTECH investments provide technology which is used on the "factory floor" and therefore, ultimately supports the procurement budget. There is no doubt in our minds that the individuals and organizations in DOD's production infrastructure are best able to identify, justify and manage MANTECH investments. They know where and how industrial productivity can and should be improved. We believe it is logically inconsistent to require them to use RDT&E funds and RDT&E administrative procedures to spend those funds for MANTECH investments when the rest of our industrial base investments are funded from the procurement appropriations."

While the program continues to receive strong support from top executives within DOD, recent actions by Congress have not been so favorable. The Army's FY 83 MMT budget request for procurement funding was deleted by the House Committee on Appropriations. The Army program was administratively transferred to the RDT&E appropriation where about half of the FY 83 money, \$50 million, was eventually restored. The Navy and Air Force were not affected. A year later, Army again included most of its FY 84 request in the procurement budget; and, once again the committee rejected this approach. As a result, Army's FY 84 MMT Program as well as those sponsored by the other Services were funded from RDT&E. The FY 85 budget requests from all Services were submitted in the RDT&E appropriations to avoid the risk of losing the program entirely. It appears that future programs will continue to be a part of RDT&E. The House committee did grant special protection to FY 84 MMT funds so they could not be used for other purposes. The committee declared the MMT Program to be "of special interest" and no appropriated funds may be reprogrammed without prior approval.

The money saving and productivity enhancing aspects of the MMT Program have been under Congressional scrutiny for years. Congress' General Accounting Office (GAO) in its most recent audit, observes that DOD has taken positive steps toward improving its management of the program; however, only a limited number of these improvements have been fully achieved. They point to the imprecise methods used in accounting for financial benefits as a major weakness. They concluded that the three Services continue to have trouble assuring the implementation of successful projects into contractor and government facilities. In addition, well documented cost savings for implemented projects have been difficult to obtain. This difficulty is most apparent when the implementing facility has not been contractually required to report productivity and cost differences brought about by the new manufacturing method. Although the Army has developed a program control automated information system which includes a module to track and document the results of implementation, the House committee expects the establishment of well defined, uniform, tri-Service systems to manage the program.

II. PLANNED FUNDING

MMT Summary

Expenditures planned by the AMC Major Subordinate Commands approach \$486 million during the five year period. Starting at approximately \$73 million in FY 84, the planned annual funding level more than doubles at the end of the period.

The Army MMT Program is controlled by a standard accounting system which contains five different appropriations. In some cases, several of the commands share an appropriation. For example, the Weapons and Tracked Vehicles appropriation is used by three commands: AMCCOM, DESCOM, AND TACOM. The distribution of the appropriations among commands is shown on the following table. The level of planned expenditures within each appropriation is illustrated by the second table. The series of bar charts illustrate the tabular funding data graphically. These charts also compare the planned expenditures with the funding limits prescribed for the AMC "summer reviews" of the RDT&E Budget estimates and Apportionment requests.

TOTALS		73,268	80,771	87,710	90,466	153,427

This table shows the planned expenditures for each fiscal year in the planning period. The "Project Code" column identifies the various RDTE project accounts established for the MMT Program.

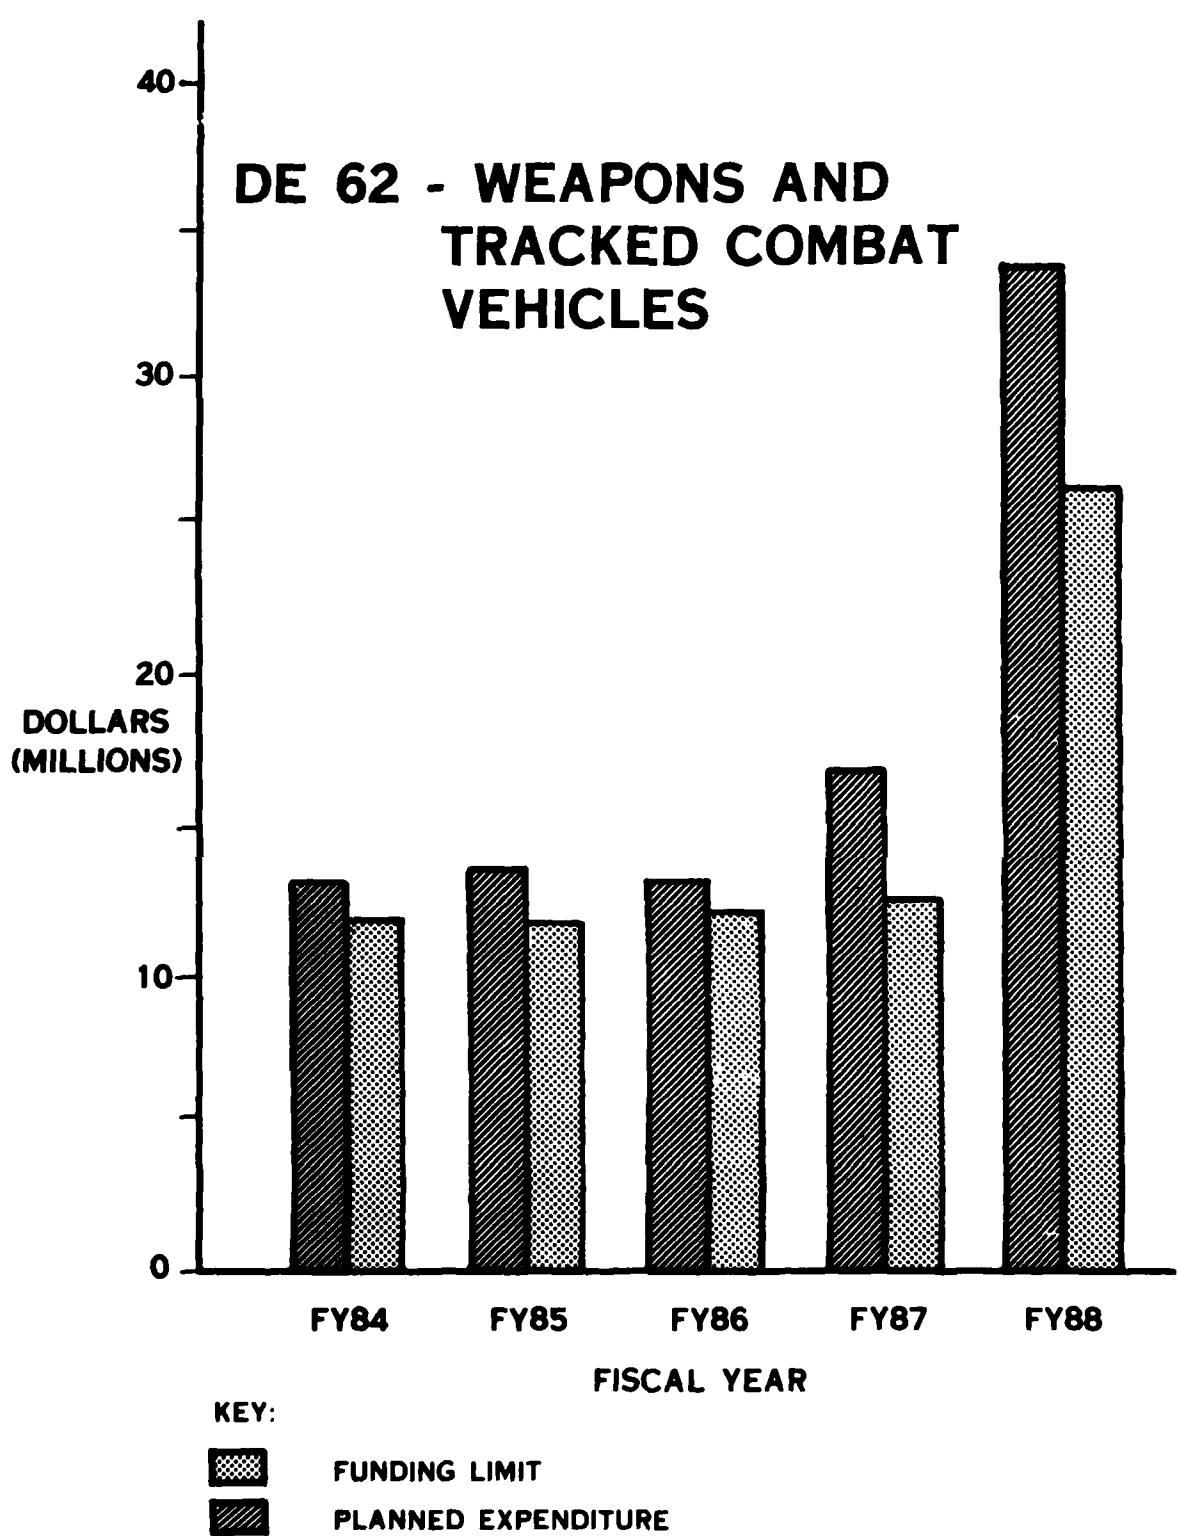

DE60 - AIRCRAFT

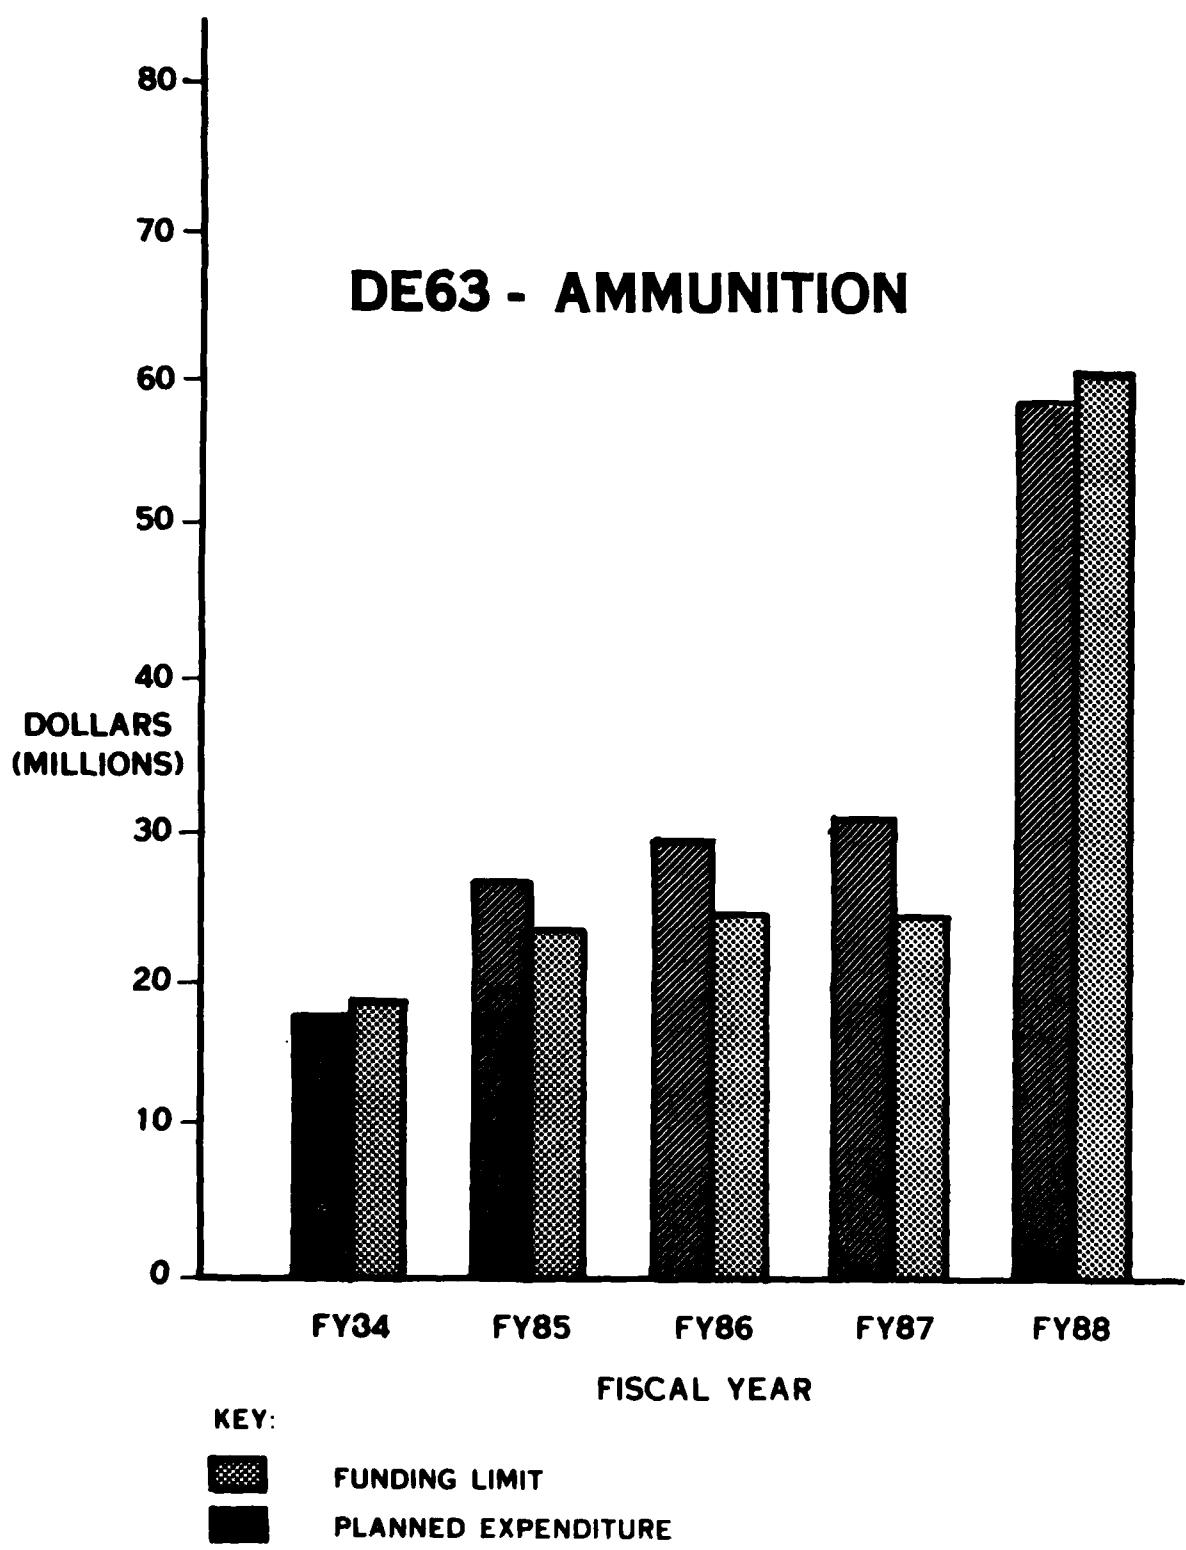

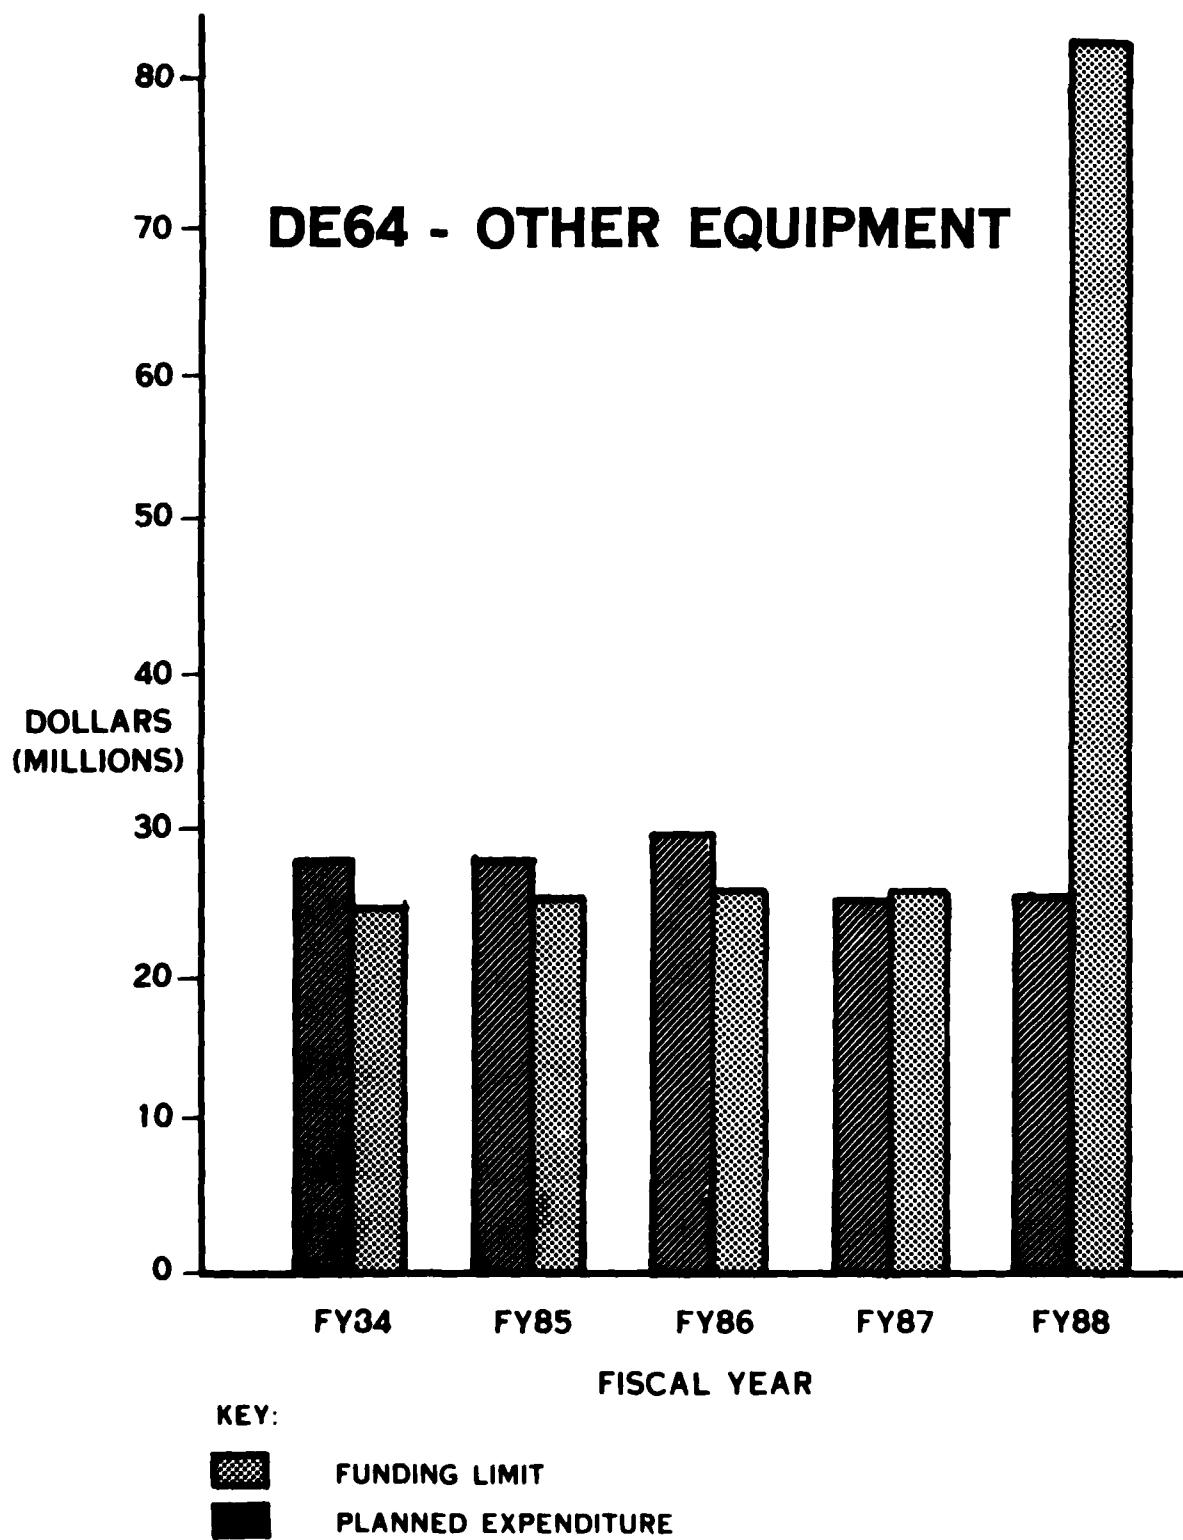

DE61 - MISSILES

DE 62 - WEAPONS AND TRACKED COMBAT VEHICLES

Military Adaptation of Commercial Items (MACI)

The MACI Program encompasses those projects that explore the feasibility of adapting commercially available products to meet Army requirements. These products could be used as replacements for standard items in the Army inventory. Or, they might be used to meet either new or increased performance requirements.

A MACI project is a cost saving alternative to an Army sponsored developmental program. With MACI, the Army searches the commercial market for nondevelopmental end items or components which might meet requirements. These items have built-in advantages: RDT&E has been done independently by the manufacturer and an operational history is usually available.

A sample item is purchased and evaluated. The evaluation typically includes minor engineering modifications and testing of the item which leads to the preparation of performance specifications. At this point, the MACI project draws to a close and procurement of the item, in quantity, begins.

In recent years, the MACI Program has provided standardized technical parameters and tests to guide the acquisition of less costly commercial hydraulic systems and replacement components. It has also evaluated an amphibious system capable of delivering 30 tons of cargo over land, water, surf and marshland at speeds up to 60 mph. The system currently being analyzed is called the Lighter Air Cushion Vehicle (LACV-30).

The approximate dollar sizes of the past, current and planned annual budgets are listed below:

<u>Fiscal Year</u>	<u>Dollars (Millions)</u>
1982	17.1
1983	9.0
1984	10.0
1985	11.8
1986	12.2
1987	12.1

MACI projects, like MMT projects, are funded by the RDT&E appropriations. The Tank-Automotive Command (TACOM) and the Troop Support Command (TROSCOM) are AMC's most active sponsors of MACI projects. TACOM's evaluations focus on the commercial vehicle market while those of TROSCOM are in the areas of commercial generators, construction equipment and climate control systems.

Analysis of Previous Planning Data

<u>FISCAL REVIEW CYCLE</u>	<u>NUMBER OF PROJECTS</u>	<u>Percent of Projects Previously Planned and Published in the:</u>		
		<u>1981 PLAN (FY 81-85)</u>	<u>1982 PLAN (FY 82-86)</u>	<u>1983 PLAN (FY 83-87)</u>
FY 85 APPORTIONMENT	143	34.3	58.0	81.8
FY 86 BUDGET	319	-----	31.7	50.5

This table shows the number of projects that currently remain in each of the two most recent fiscal review cycles. It also shows the percentage of those projects that appeared in previous editions of the MMT Program Plan. This illustrates the improved planning accuracy that naturally occurs as the planning process and the budgeting process converge.

III. NEW WEAPON SYSTEMS

Today, the United States has the finest technological capability and one of the highest industrial capacities in the world. The MMT Program serves to preserve and enhance the productivity and readiness of the defense production facilities, sources for weapons systems, components, and repair services. These weapons will modernize the forces by performing a variety of combat missions, from the nation's command center to the front line of battle. Selected systems that illustrate the direction and importance of our equipment modernization programs follow:

The Abrams tank and the Bradley fighting vehicle are new systems that the Army is procuring to improve the combat effectiveness of the forces which may be challenged by Soviet T-64 and T-72 tanks and BMP fighting vehicles. The speed, mobility and shoot-on-the-move capability of the Abrams tank have added a new dimension to combat capabilities. Because a mix of armor and infantry forces is necessary for mutual support on the modern battlefield, the Bradley fighting vehicle has been developed. This system provides the cross-country mobility and armor protection necessary to keep pace with the Abrams tank. The Bradley fighting vehicle's 25-millimeter cannon can defeat Soviet armored infantry fighting vehicles at battlefield ranges. With the TOW (tube-launched, optically-tracked, wire-guided) system, the Bradley crews can defeat modern Soviet tanks at long ranges.

New and improved weapons systems will bring about a synergistic effect on the battlefield. The Abrams tank and BFV complement each other and are a highly effective team. The M9 Armored Combat Earthmover, a vehicle designed specifically for our combat engineers, further increases the combat effectiveness of tanks, fighting vehicles, and other systems on the modern battlefield. In the hands of the engineers, the M9 is used to prepare fighting positions for all types of equipment and units, and is also employed to create obstacles when and where needed. Additionally, it has the speed and mobility to keep pace with combat forces and it provides its crew with armor and chemical agent protection to improve survivability on the lethal battlefield of today and tomorrow. A multi-year, competitive procurement contract for nearly 1,400 vehicles is planned.

Another major component in the combat arsenal, which complements the capabilities of ground forces, is the attack helicopter. This weapon plays a major role in any situation which requires a rapid response to an enemy threat or an opportunity to exploit a developing tactical advantage. The AH-1 Cobra helicopter, a proven system, is being upgraded to enhance its survivability on the modern battlefield. The Cobra however, is essentially a daylight aircraft with limited performance capabilities in some altitudes and climates. These limitations make it less than optimal for the many environments in which the Army may be called upon to fight.

In addition to upgrading the Cobra attack helicopter, procurement of the new Apache attack helicopter is continuing. The Apache's agility enables its crew to take maximum advantage of the environment to avoid detection. A target-acquisition-and-designation sight and a night-vision sensor enable the Apache to attack regardless of visibility restrictions. The Hellfire missile, with which the Apache will be equipped, is a laser-guided missile capable of delivering both direct and indirect fire. Hellfire is faster, has greater range, and is more lethal than the TOW missile. Armed with the Hellfire missile and a 30-millimeter chain gun, the Apache brings an awesome combination of lethality and versatility to the modern battlefield. The Apache attack helicopter procurement program is in its third year.

Our land forces must be able to shoot deep into the enemy's rear areas with great accuracy and massive firepower, while simultaneously striking enemy targets which are engaging our front-line units. Procurement of artillery systems will continue to provide indirect fire support for committed land forces. This procurement is not limited to firing systems but also includes target acquisition and fire control systems.

The Army's longest range weapon is Pershing II, a solid-fueled, two stage, ballistic missile designed to strike high-threat, time-sensitive enemy targets. Its sophisticated radar terminal guidance system, which automatically makes in-flight corrections, will result in pinpoint accuracy and permits use of smaller nuclear warheads than were required with older, less efficient systems. Truck-mounted and highly mobile, the Pershing II will be a survivable and powerful addition to deterrent posture and fighting capability.

For direct support of our front line forces, the Army is procuring the Multiple Launch Rocket System (MLRS). A free-flight, area fire weapon system, the MLRS will fill a void in current indirect fire capability. Designed to suppress enemy defenses and provide artillery counter-fire, the MLRS delivers large volumes of munitions against time-sensitive targets in a minimum amount of time. MLRS was developed in cooperation with the United Kingdom, France, Italy, and Germany. This joint program is achieving cost effectiveness while enhancing modernization and near-term combat readiness of the NATO forces through procurement of common systems. Acquisition of the MLRS remains on schedule with a proposed total program acquisition systems cost projected to be below the original 1978 planning estimate.

The Battery Computer System (BCS) increases the speed and accuracy with which artillery fire can be delivered on target, and procurement of this system is proceeding under the terms of a multi-year contract. The Ground Laser Locator Designator which enables first round fire-for-effect on targets with both conventional and precision guided munitions is being distributed to European combat units.

Tactical nuclear weapons, a major force-multiplier in deterrence and warfighting capabilities, need modernization. Weapons incorporating technology which is more than 20-years old must be replaced to assure reliability and effectiveness. Programs for theater nuclear force modernization include continued procurement of the 8-inch nuclear artillery projectile as well as development of a new 155-millimeter nuclear projectile. These programs will continue to provide a credible theater nuclear force.

Survival on the battlefield of the future will require extensive protection against chemical weapons. Efforts will continue to develop improved chemical defense material and to reduce the significant degradation of military performance in a chemical warfare environment. Long-term research and development programs are required to develop follow-on protective systems for armored vehicles, new protective masks, secure command and control facilities, and rest areas for soldiers. Additionally, more reliable and advanced chemical detectors are needed as well as improved methods of decontamination.

Interdiction of high-value second echelon targets is of great concern. To facilitate accomplishment of this interdiction mission, the Army is developing a combination of mutually supporting sensor and computer based display devices which can detect and classify movement of personnel and wheeled and tracked vehicles at ranges up to 100 kilometers. The Remotely Monitored Battlefield Sensor System (REMBASS), with the use of data relays, will provide targeting data at extended ranges so that enemy formations can be engaged before they reach the front-line battle area.

The Army of the future requires for its survival the capability to detect and locate ground-moving targets, command posts, assembly areas, and low-flying helicopters and fixed-wing aircraft. In conjunction with the Air Force, the Army is developing the Joint Surveillance and Target Attack Radar System (JOINT STARS), which is based on a merger of technology developed for the Army Battlefield Data System and the Air Force PAVE MOVER program. A primary advantage of the system will be the simultaneous broadcast of intelligence data to multiple ground stations throughout the battle area.

The Army's future reconnaissance and target acquisition capability will be enhanced by the remotely piloted vehicle (RPV). Because a potential enemy's air defense capability could make manned flights penetrating into his rear area risky, an RPV with low-light television and a forward-looking infrared night vision sensor is the ideal platform for providing real time information on front line and second echelon enemy troop dispositions. The RPV also will have the capability to adjust artillery fire and designate targets for laser-terminated precision-guided munitions.

Another area which has great potential for future development is that of artificial intelligence and robotics. Five primary areas employing this relatively undeveloped technology are being explored. The thrust of this research is to develop nearly autonomous robot operation of vehicles or equipment for ground reconnaissance, ammunition loading, information interpretation, training and maintenance, and medical diagnostics. Robots will possess extremely sophisticated decision-making microelectronic software. While some minimal human control will be required, the potential for human and cost savings as a result of this technology is enormous. Robot manned weapons systems which would have the capability to "recognize" and engage an enemy without direct and immediate human support represents just one possible application of this new technology.

While the Army's materiel acquisition philosophy recognizes the importance of improving fielded systems whenever feasible, it also recognizes that the potential for improvement of a given system is limited. Air defense systems illustrate this situation.

On the battlefields of today and tomorrow, Soviet fixed and rotary wing aircraft present a significant threat to our land forces. Some of our current air defense systems were not designed to function in today's electronic countermeasures environment, nor are they capable of multiple target track and engagement. The technology that provides these capabilities today did not exist 20 years ago. Patriot, the SGT York division air defense (DIVAD) gun, and Stinger--products of more modern technology--are ready to fill the gaps where older systems are inadequate and where the potential for product improvement has been exhausted.

The Patriot is the Army's new all-weather, long-range, surface-to-air missile system. This weapon can simultaneously attack and destroy several enemy aircraft while tracking scores more. Capable of operating under intense electronic jamming conditions which will characterize the battlefield of the future, the Patriot has sophisticated radar guidance features and a proximity fuzed warhead. In comparison with the systems it is replacing, Patriot has greater reliability and achieves a dramatic increase in operational effectiveness.

An important system in the air defense family of weapons is the Improved Hawk (IHAWK) missile which provides large area coverage for air bases and facilities in NATO's rear areas. Improved spare parts availability and the Army's program to apply product improvements to this already developed and proven system will assure its effectiveness against the evolving threat well into the 1990s.

The self-propelled Chaparral, the Army's short-range air defense missile system, was first fielded in 1969. It will remain in the Active Army inventory through the 1990s and is being provided to Reserve Components. A towed version, which enhances strategic mobility, is being developed for light forces. Chaparral has already undergone significant modifications to maintain its effectiveness, and further development will provide increased engagement range while reducing its vulnerability to enemy countermeasures.

Complementing the capabilities of the Chaparral is the 40-millimeter SGT York DIVAD gun. This system provides our heavy divisions with a modern anti-aircraft weapon which can maneuver with front line units and engage sophisticated aircraft. The SGT York is a survivable, radar-controlled system, which is capable of defeating high-performance aircraft as well as the Soviet HIND attack helicopter.

Fielding of the Stinger air defense missile, the Army's first new manportable air defense system since the late 1960s, adds a significant capability to the land forces. Development of a second generation of this missile with an improved guidance system designed to overcome enemy countermeasures has been completed. Called Stinger-POST (passive optical seeker technique), this improved weapon has entered production.

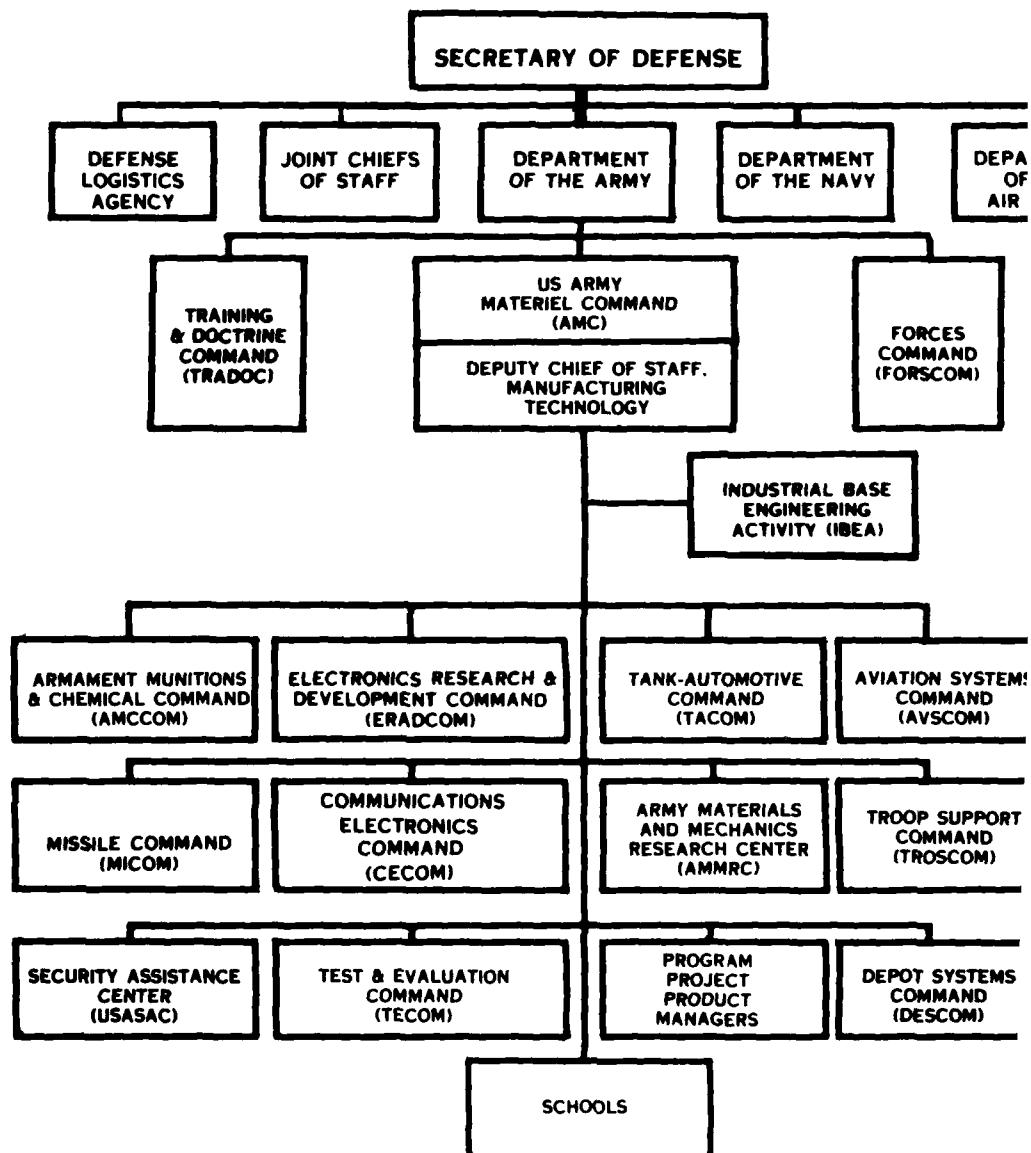

Long-term economies can be achieved by the Army through development and acquisition of battlefield simulators. Interest and investment in training simulators is increasing. Simulators conserve fuel, ammunition and space. They also reduce wear and tear on weapons and equipment and generally decrease training and operating costs. Further, simulators offer training that cannot be duplicated because of safety and cost limitations. Malfunctions can be simulated, events frozen and procedures demonstrated until competence is developed. In FY 84, the Army will procure a variety of simulators to enhance our overall training and readiness.

IV. INDUSTRY GUIDE

This section explains how projects are selected for the Plan, how they are developed and submitted for funding and how contracts are awarded to industry.

The objective of the MMT Program is to develop new manufacturing methods and processes that will reduce the cost of weapons systems production. Within the AMC, the Deputy Chief of Staff for Manufacturing Technology is the office established and charged with overall program responsibility. The functional responsibility is assigned to the commodity oriented, major commands that are subordinate to AMC. These Major Subordinate Commands (SUBMACOMs) plan, formulate, budget, and execute individual projects. The Industrial Base Engineering Activity (IBEA) assists AMC on the technical aspects of the program. The chart on the next page depicts the hierarchical relationship of these organizations.

UNITED STATES ARMY MATERIEL COM (AMC)

Identification of manufacturing problems is the first step in developing an annual program. Problem areas are conceptualized by the SUBMACOMs and sent to IBEA for the compilation of a five-year planning document (the Program Plan). At the date of publication, the 1984 Program Plan, for example, contains one funded year (FY 84), two programmed years (FY 85-86), and two planned years (FY 87-88).

As the program cycle proceeds, out-year plans are refined and project proposals are prepared and submitted for evaluation during the budget review phase. These proposals are documented in what is known as a P-16. A P-16 is simply a format used to document estimated project cost, economic justifications, and a description of work. The budget submission represents the first bid for inclusion in the program.

Industry has the opportunity to participate in the technical evaluation of the budget program during the annual Manufacturing Technology Advisory Group (MTAG) conference. The MTAG conferees can also discuss the out-year concepts contained in the Program Plan and suggest technical adjustments to the current program.

The budget submission is followed about twelve months later by a second, and more definite, submission which involves another evaluation leading to the apportionment of available funds. Criteria for funding individual projects include technical, operational, and economic feasibility. Evaluation includes the potentials for technical success, implementation of results, and return on investment. The interrelationships between these factors are also considered. Approximately 300 projects enter the budget review phase each year and about 170 of them are funded when the new fiscal year begins. Although this is the normal cycle, a project can enter it at any point in time. Such a project is known as a late start submission and funding is usually granted at the expense of another project.

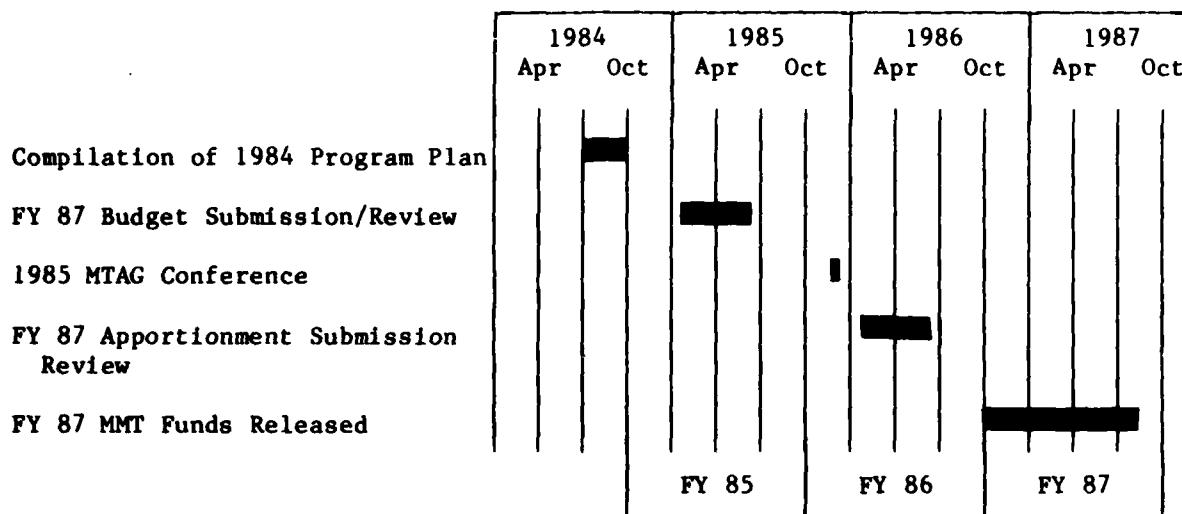

A calendar depicting the program cycle is shown on the next page. The federal Government budgets and spends on a fiscal year basis. The fiscal year starts on the first of October and ends on the following thirtieth of September. For example, FY 85 begins on 1 October 1984.

Throughout the Program Plan reference is made to various appropriations. These appropriations are established by the US Congress as a standard accounting system. Most MMT efforts are funded through the Research, Development, Test and Evaluation (RDTE) Appropriations which include (1) Aircraft, (2) Missiles, (3) Weapons and Tracked Vehicles, (4) Ammunition, and (5) Other.

A substantial portion of the annual program is placed on contract. In recent years, about 60 percent of the funding has been awarded to the private sector. Much emphasis is placed on free competition for MMT contracts, with equal opportunity given to all interested, qualified business firms.

MMT Planning/Budgeting/Review Cycle

YEARLY ACTIVITIES

Services and materiel are acquired from industry by two basic methods - formal advertising and negotiation.

Congress has established formal advertising as the preferred method of contracting for military supplies and services. The Army derives price and other benefits that result from a full and free competition for contracts. Formal advertising also provides all bidders with an equal opportunity to develop and submit bids based on the same set of Army specifications. Procedures are prescribed by law and are detailed and rigidly written to assure equal treatment for all bidders.

The prerequisites for formal advertising are quite specific; and they are critical, because absence of any one of them will preclude successful use of the method. The prerequisites are as follows:

1. Army specifications must be complete, explicit, available to all potential bidders, and unrestricted because of security.
2. Two or more capable sources must be available to assure competition.
3. There must be enough time to conduct the procedures as prescribed. The Army must develop and assemble a complete statement of needs, terms, and conditions of contract into a proper Invitation for Bid. Bid invitations must be distributed; bids prepared and submitted by bidders, opened and evaluated by the Army, and a contract awarded. This process may span 60 to 120 days.

4. The Army must select the successful bidder on the basis of price alone, provided the bidder is otherwise qualified as responsive and responsible.

A variant procedure, closely approximating formal advertising, is referred to as "two-step formal advertising." This method is used when existing specifications are inadequate for use. Although not as preferable as formal advertising, "two-step formal" is clearly preferable to negotiation, and its use is required where the following prerequisites exist:

1. Specifications are not definitive. Technical discussions and evaluations must insure mutual understanding between Army and prospective contractors.
2. Definite criteria for evaluating proposals from prospective contractors exists.
3. More than one technically qualified source is expected to compete.
4. There must be enough time to conduct the two-step procedure; normally 100 to 150 days.
5. A "firm fixed price" or a "fixed price" contract will be used.

The first step of the process is initiated by the Army's request for technical proposals based upon performance specifications. These proposals are evaluated and discussed by both parties as necessary, but price is not a subject for these discussions. The Army then makes a determination as to the technical acceptability of the supplies or services offered and may summarily reject some outright, or make provisions for modification and acceptance of proposals that are marginal.

The second step of the procedure is conducted as a formally advertised procurement, except that advertising is limited to those who have submitted technically acceptable proposals during the first step. Each bidder must then bid on the basis of meeting the performance specification and providing the exact supply or service proposed by him and approved by the Army during the first step. Although products or services of the bidders may vary, award of contract is based on price alone.

Not all requirements can be obtained through the advertising processes. As a third alternative, acquisition by negotiation is permitted. The development of new systems or production of complex equipment, for example, demands much discussion, clarification, exploration, or modification of proposals between both parties. Under specific circumstances prescribed by Congress, negotiation is generally preferable when:

1. The item is critical or complex.
2. Delivery is urgent.
3. Few suppliers exist and competition is impractical.
4. Specifications are incomplete or unstable.
5. Emergency conditions exist.
6. The item required may demand a sizable investment by industry in fixed assets.
7. Security classification precludes advertising.
8. Total interchangeability of parts with existing supplies is absolutely necessary; no compromise is justified.
9. Industry experience is lacking. Responses to formal advertising will be replete with contingency costs.
10. The Army must deal with sole or limited sources.

The negotiation process resembles the purchasing process used in industry. Not all industry practices, however, are accepted in the negotiation process. For example, companies that buy from each other often develop long term understandings. In contrast, this relationship between the Army and a private company is not permitted.

Formal advertising is conducted in full public view with the bids of all firms known to all competitors prior to award of contract. This is not true in negotiation. Negotiation is a process closed to the public. Proposals submitted by a company are not disclosed and subsequent bargaining on the basis of these proposals are conducted individually. In this way, the spirit of competition is maintained among the few suppliers that may be participating. Only after the award of a contract is the successful company made known and the terms and conditions of the contract disclosed.

In recent years, more than one-half of all Department of Defense requirements have been purchased by "two-step" procedures and negotiation. Most MMT contracts have been reached through the same methods.

A business firm seeking to participate in the MMT Program should inform Army procurement offices of the capabilities it has to offer and request that the firm be placed on appropriate bidders' mailing lists. Copies of Standard Form 129, "Bidders Mailing List Application," are available at most federal agency procurement offices. A copy of this form is included in the publication "Selling to the Military." This

publication also contains a comprehensive list of procurement offices and it may be purchased from the Superintendent of Documents, US Government Printing Office, Washington, DC, 20402.

Each procurement office has unique supplemental instructions for the Bidders Mailing List Application; therefore, individual requests should be directed to each office. These instructions should be followed carefully to assure prompt processing. After a firm is placed on the list, it will receive all solicitations covering any requirements that could be met by its stated capabilities.

The "Commerce Business Daily," published by the Department of Commerce, is a valuable source of information to businessmen in identifying products and services which individual military procurement offices are currently buying. The publication also lists subcontract opportunities offered by Defense prime contractors, recent contract awards which could lead to imminent subcontract opportunities, surplus sales information, and other pertinent information on procurement actions. The "Daily" is available for inspection at each of the procurement offices; the field offices of the Small Business Administration, Department of Commerce, and General Services Administration; and, other cooperating offices, including many local chambers of commerce. It can also be purchased through subscription. To order, send \$175 for 1st class postal delivery or \$100 for 2nd class along with a full mailing address to the Superintendent of Documents, US Government Printing Office, Washington, DC, 20402. Credit card orders are accepted: telephone (202) 783-3238.

NOTE: Various government publications were used as sources for the preceding information.

V. PROCESS TECHNOLOGY INDEX

The projects fully described in the body of this document are grouped into "Categories" and "Components" which are end item type descriptors. This index lists all the projects, less Problem and Solution statements, and groups them by technical areas. The primary grouping of this index is by the primary Manufacturing Technology Advisory Group (MTAG) sub-committee designator (i.e., CAD/CAM, Electronics, Metals, Non-Metals, Munitions, and Test & Inspection). Within each MTAG group, projects are further grouped alphabetically by process.

VI. COMMAND PLANS

**ARMAMENT, MUNITIONS AND CHEMICAL COMMAND
(AMCCOM)**

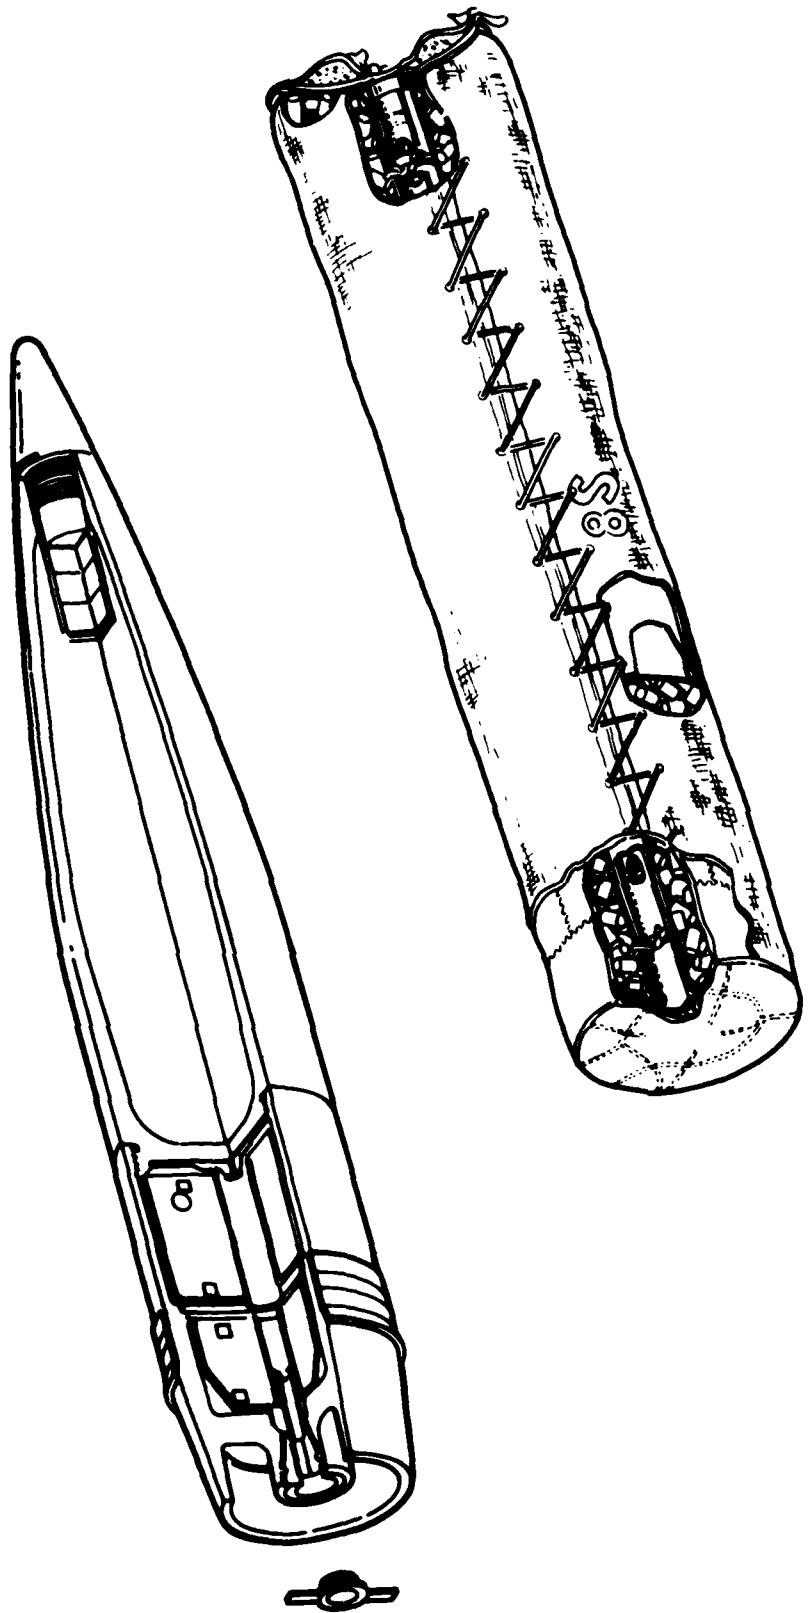

US ARMY ARMAMENT, MUNITIONS AND CHEMICAL COMMAND (AMCCOM)

AMCCOM, with headquarters at Rock Island, IL, provides and performs life-cycle management over the accomplishment of total research, development, engineering, procurement, and materiel readiness functions for conventional and nuclear weapons; ammunition (artillery, infantry, gun type air defense, surface vehicle mounted and aircraft mounted); fire control systems; chemical warfare and chemical biological defensive systems/materiel; Ammunition Peculiar Equipment (APE); Test Measurement, and Diagnostic Equipment (TMDE); and tools and maintenance equipment.

AMCCOM is also the single manager for the procurement, production, supply, maintenance and transportation of conventional ammunition for the Department of Defense.

The AMCCOM complex includes the Headquarters, two research and development centers, three project managers, four arsenals, 30 ammunition plants and activities, Defense Ammunition Center and School, and various other field and support activities. The two research and development centers (Chemical and Armament) are located at Aberdeen Proving Ground, Maryland and Dover, New Jersey respectively. The Armament Research and Development Center includes the Large Caliber Weapon Systems Laboratory, the Fire Control and Small Caliber Weapon Systems Laboratory and the Ballistic Research Laboratory. These two research and development centers are responsible for research, design, development and life cycle engineering for assigned materiel. Rock Island Arsenal in Illinois is best known for the production and assembly of gun mounts, receivers and recoil mechanisms, and for its tool set assembly mission. Watervliet Arsenal has the unique mission of producing gun and cannon tubes for the Army, Navy and Marines. Pine Bluff Arsenal is responsible for defensive chemical munitions and equipment and is the only current site at which white phosphorous-filled items are loaded. Rocky Mountain Arsenal performs demilitarization of obsolete chemical agent identification sets.

The command is staffed by approximately 22,000 military and civilian personnel. Also, 18,000 persons are employed by contractors at AMCCOM plants.

AMMUNITION PROGRAM

Bridging the technology gap, particularly in those areas that have no civilian counterpart, is a challenging task for the Ammunition MMT Program. In many respects, the Ammunition program presents unique problems which require innovative solutions. Current operations involve a great many hand operations, and methods must be found to efficiently mechanize these. Batch processes must be converted to continuous processes in order to take advantage of new materials handling techniques and to improve the safety of operations.

The primary objective of the Ammunition Manufacturing Technology Program is to improve existing manufacturing processes, techniques, and equipment. The second objective is to bridge the gap between development and full-scale production. The third objective is to solve technological problems identified in the program.

In response to the Warsaw Pact's formidable offensive capability to wage chemical warfare, our capability to produce chemical and biological defense systems are being upgraded. Improved manufacturing techniques are required for decontamination kits, chemical agent detection/warning systems and protective gear. The most sophisticated of these systems are first generation sensors which can detect the presence of toxic agents at remote distances. Hand fabrication methods used during initial development are unsuitable for quantity production. The MT program will develop new techniques for fabricating sterling cycle coolers, optics, interferometers and cryogenic detectors. These detection system components will be processed in pilot facilities where the new techniques can be evaluated prior to full-scale production.

High rate production is scheduled, late in the 1980s, for a new precision guided munition for the 8-inch howitzer. It is called sense and destroy armor (SADARM). The SADARM projectile is fuzed to eject submunitions over the target area. While each submunition descends, its fuze detects the infrared signature of a target such as an armored vehicle. The fuze also selects the exact moment to fire the warhead which strikes and penetrates the relatively soft top of the target. SADARM fuze production will benefit from the automated manufacturing, assembly and testing techniques being developed for millimeter wave devices during this five-year period.

The Manufacturing Methods and Technology effort in the Load, Assemble and Pack area is guided by four major program goals; improved economy of operation, improved safety conditions for operating personnel, establishment of a rapid response production capability, and improvements in the quality of the end product produced. All of these goals must be accomplished within the standards and criteria established for pollution abatement and energy conservation.

M&T FIVE YEAR PLAN
R&CS DRAFT 126

COMPONENT -- GENERAL

(C928) TITLE - PROC TECH FOR VEHICLE ENGINE EXHAUST SYSTEM

PROBLEM - AN URGENT NEED HAS BEEN ESTABLISHED BY TRADOC FOR AN M-1 TANK SMOKE SYSTEM THAT WILL BLIND DEVICES WHICH DETECT IN THE IR SPECTRUM. A VEHICLE ENGINE EXHAUST SYSTEM USED AS THE MEANS TO DISSEMINATE THE IR SCREENING AGENT PRESENTS PRODUCTION PROBLEMS.

SOLUTION - PROCESS STUDIES WILL INCLUDE, IR AGENT PREPARATION AND TREATMENT, MATERIAL HANDLING, AND LOADING TECHNOLOGY FOR THE CONTAINERS.

CATEGORY

Chemical

COMPONENT -- DECONTAMINATION

(C012) TITLE - MULTI-PURPOSE CHEMICAL-BILOGICAL DECONTAMINANT

PROBLEM - PRODUCTION PROCESS ENGINEERING PROBLEMS MUST BE IDENTIFIED DURING R&D USING PEP FUNDS. PROCESS TECHNOLOGY REQUIRED UNDER PRODUCTION CONDITIONS FOR COMPLEX AREAS MUST BE INVESTIGATED.

SOLUTION - AS A RESULT OF PEP, ESTABLISH PILOT FACILITIES AND PROVE OUT THE MASS PRODUCTION FEASIBILITY OF COMPLEX PROCESSES AND FABRICATION. PROVIDE DATA OF M AND PROCESS TOLLING DESIGN DATA.

(C014) TITLE - IMPROVED CHEMICAL-BILOGICAL DECONTAMINANT (ICB0)

PROBLEM - PRODUCTION PROCESS ENGINEERING PROBLEMS MUST BE IDENTIFIED DURING R&D USING PEP FUNDS. PROCESS TECHNOLOGY REQUIRED UNDER PRODUCTION CONDITIONS FOR COMPLEX AREAS MUST BE INVESTIGATED.

SOLUTION - AS A RESULT OF PEP ESTABLISH PILOT FACILITIES AND PROVE OUT THE MASS PRODUCTION FEASIBILITY OF COMPLEX PROCESSES. PROVIDE DATA OF M AND PROCESS TOLLING DESIGN DATA.

(10943) TITLE - SPIN COATING LF DECON AGENT CONTAINERS

PROBLEM - CURRENT METALLIC DECON AGENT CONTAINERS CORRODE BEFORE THE REQUIRED SHELF LIFE OF THE AGENTS IS REACHED. ALTERNATIVE CONTAINERS ARE NOT AVAILABLE, BUT PLASTIC LINERS HAVE BEEN SHOWN TO EXTEND THE LIFE OF CURRENT CONTAINERS SIGNIFICANTLY.

SOLUTION - ESTABLISH THE SPIN COATING OR ROTATIONAL MOLDING TECHNIQUE FOR COATING THE INSIDE OF CURRENT METALLIC CONTAINERS WITH CHEMICALLY RESISTANT POLYMERS FOR THE PRODUCTION ENVIRONMENT.

COMFAC-MT -- PROCESSES

(1577) TITLE - IMPROVED OF PROCESSES TECHNOLOGY FOR BINARY MUNITIONS

PROBLEM - IN THE CURRENT PRODUCTION OF METHYLPHOSPHONIC DIFLUORIDE, THERE IS PRODUCT LOSS DURING PURIFICATION AND DISTILLATION.

SOLUTION - THE EFFICIENCY OF THE PRODUCTION PROCESS WILL BE IMPROVED BY MODIFYING THE REACTOR AND DISTILLATION PRESSURES, USE ALTERNATE PACKING MATERIALS, AND VARYING REFLUX RATIOS DURING DISTILLATION.

COMFAC-MT -- PROTECTIVE GEAR

(1578) TITLE - LEAK STANDARDS FOR PROTECTIVE MASK

PROBLEM - AN INDEPENDENT LEAK TESTING STANDARD IS REQUIRED FOR OPERATION OF PROTECTIVE MASK ACCEPTANCE TEST EQUIPMENT. THE PRESENT PROCEDURE IS SUBJECT TO CONSIDERABLE OPERATOR ERROR IN DETERMINING THE PASS OR FAIL OF A PROTECTIVE MASK.

SOLUTION - A LEAK TEST STANDARD CONTAINING A KNOWN LEAK FACTOR WILL BE PROVIDED IN ORDER TO CALIBRATE THE EQUIPMENT WHICH WILL ALLOW THE OPERATOR LITTLE CHANCE FOR MISINTERPRETING THE FAILURE POINT.

(15924) TITLE - MANUFACTURING PROCESS FOR GAS MASK CANISTERS

PROBLEM - THE CANADIAN GAS MASK CANISTER IS BEING ADAPTED TO THE US STANDARDS UNDER A MACI PROGRAM. THE CANADIANS ARE HAVING DIFFICULTY PRODUCING THE CANISTERS RESULTING IN HIGH REJECT RATE.

SOLUTION - PROVIDE A PILOT FACILITY FOR THE EQUIPMENT, TOOLING AND TEST EQUIPMENT TO ESTABLISH AND DOCUMENT THE MANUFACTURING PROCESS FOR PRODUCING ACCEPTABLE CANISTERS.

(15925) TITLE - PROTECTIVE MASK LEAKAGE TESTING

PROBLEM - CURRENT GAS MASK TESTER DOES NOT SIMULATE THE ACTUAL FIELD USE AND IS NOT SENSITIVE ENOUGH TO DETECT SMALL LEAKS.

SOLUTION - DEVELOP A MASK LEAKAGE TESTER THAT SIMULATES ACTUAL USAGE AND PROVIDES MAXIMUM SENSITIVITY TO CHALLENGE VAPORS.

COMFAC-MT -- PYROTECHNICS

(157.C) TITLE - DEVELOP MANUFACTURING TECHNOLOGY FOR 40MM CS MUNITIONS

PROBLEM - CURRENT PRODUCTION FACILITIES EXIST ONLY IN PRIVATE INDUSTRY. THIS MUNITION WILL NOW BE PRODUCED IN GOCL FACILITY FOR M&B PURPOSES. CURRENT PROCESS REQUIRES IMPROVEMENTS FOR GS/CEPA STANDARDS.

SOLUTION - PROVIDE PILOT FACILITY TO PROVE OUT THE TOP. PH-YLUT DESIGN CRITERIA AND PROCESS BASELINE FOR THE LAP OF CS MUNITIONS.

(4145) TITLE - CONTROL DRYING IN AUTO SB AND BALL PROP MFG

PROBLEM - OFF-LINE ANALYSIS FOR MOISTURE AND VOLATILES MAKES IT DIFFICULT TO CONTROL A CONTINUOUS DRYING OPERATION SINCE THE TIME REQUIRED FOR ANALYSIS IS LONG COMPARED TO THE RESIDENCE TIME FOR THE PROPELLANT IN A CONTINUOUS DRYER.

SOLUTION - USE PRODUCT TEMPERATURE AND/OR ON-LINE ANALYZERS AND FLOW METERS AS A BASIS FOR IMPROVED CONTROL OF A CONTINUOUS DRYING OPERATION AND REDUCE THE AMOUNT OF OFF-LINE ANALYSIS REQUIRED.

(4273) TITLE - AUTO PRODUCTION OF STICK PROPELLANT

PROBLEM - PRESENT BATCH TECHNIQUES FOR STICK PROPELLANT MFG INVOLVE MUCH HAND LABOR THEREBY RESULTING IN LIMITED PRODUCTION CAPACITY, HIGH COST, AND HAZARD EXPOSURE.

SOLUTION - INSTALL AND EVALUATE PROTOTYPE EQUIPMENT TO AUTOMATE THE TAKE-AWAY AND CUTTING OPERATIONS FOR SOLVENT-TYPE STICK PROPELLANT. THIS PROLESS WILL OPERATE WITH EXISTING 12 INCH PRESS AND PRESS BAY.

(4615) TITLE - IMPROVE SOLVENTLESS PASTE BLENDING

PROBLEM - PASTE BLENDING AND FINAL BLENDING OF STICK PROPELLANT IS NOW REQUIRED. A MORE INTENSIVE PASTE BLEND MAY ALLOW ELIMINATION OR REDUCTION OF THE FINAL BLENDING STEP.

SOLUTION - PURCHASE, INSTALL AND EVALUATE PROTOTYPE EQUIPMENT TO IMPROVE PASTE BLENDING.

(4600) TITLE - AUTOMATED BLENDING OF STICK PROPELLANT

PROBLEM - MANUAL BLENDING OF STICK PROPELLANT IS LABOR AND SPACE INTENSIVE AND CANNOT SUPPORT PRODUCTION OF LARGE QUANTITIES OF STICK PROPELLANT.

SOLUTION - DEVELOP A MECHANICAL STICK BLENDER TO AUTOMATICALLY BLEND AND PACK LUGG STICK PROPELLANT.

(4699) TITLE - WATERING OF WASTE PROPELLANT INCINERATOR FEED

PROBLEM - WASTE PROPELLANT INCINERATOR REQUIRES HIGH TEMPERATURE FOR COMPLETE COMBUSTION OF GASES AND EVAPORATION OF SLURRY WATER. THE GREATER THE WATER TO PROPELLANT RATIO THE GREATER THE FUEL OIL REQUIREMENT.

SOLUTION - DEVELOP A METHOD TO VAPORATE THE INCINERATOR FEED TO A MINIMUM LEVEL CONSISTENT WITH HANDLING.

HHT FIVE YEAR PLAN
RCS DRCHT 126

FUNDING 1,0000

COMPONENT -- MULTI-BASE

(452) TITLE - AUTOMATED PRODUCTION OF MULTI-BASE STICK PROPELLANT ON CAMBL

PROBLEM - VARIOUS HIGH ENERGY AND LOVA GRANULAR AND STICK MULTI-BASE PROPELLANTS ARE BEING DEVELOPED. BATCH FACILITIES FOR MULTI-BASE HAVE A CONSTRAINED CAPACITY. A NEW CAMBL IS BEING BUILT BUT HAS NOT PROVEN CAPABLE OF MANUFACTURING STICK PRPELLANTS.

SOLUTION - ADAPT RECENTLY DEVELOPED CAMBL PROCESS TO DEMONSTRATE THE MASS PRODUCIBILITY OF THE NEW PRPELLANTS. THIS WILL INSURE A PRODUCTION BASE FOR STICK PRPELLANT AND PREVENT HAVING TO USE AND/OR BUILD INEFFICIENT BATCH FACILITIES.

(454) TITLE - DEVELOP A THIRD GENERATION DYNAGUN TO SIMULATE TANK GUNS

PROBLEM - STANDARD BALLISTIC EVALUATION TESTS ARE THE ONLY MEANS AVAILABLE FOR ASSESSING PRPELLANTS FOR HIGH PRESSURE/HIGH VELOCITY SYSTEMS SUCH AS THE 105MM AND 120MM TANK GUNS. THESE PROCEDURES ARE VERY EXPENSIVE AND TIME CONSUMING.

SOLUTION - DEVELOP A THIRD GENERATION DYNAGUN WHICH CAN BE USED IN LIEU OF STANDARD BALLISTIC TESTS AS A MORE RAPID AND LESS COSTLY MEANS OF ASSESSING PRPELLANTS FOR THE 105MM AND 120MM TANK GUNS.

(457) TITLE - IMPROVED BATCH PROCESSING OF MULTI BASE PROPELLANTS

PROBLEM - BATCH MANUFACTURE OF MULTI-BASE PROPELLANTS REQUIRES MANY OPERATIONS WHICH ARE LABOR INTENSIVE DIFFICULT TO CONTROL AND HAZARDOUS TO THE OPERATORS.

SOLUTION - PROVIDE PROTOTYPE EQUIPMENT TO IMPROVE, SIMPLIFY AND COMBINE OPERATIONS IN BATCH PROCESSING OF MULTI-BASE PROPELLANTS BOTH GRANULAR AND STICK TO REDUCE COST AND OPERATOR HAZARD.

(465) TITLE - NITRAMINE PROPELLANT PROCESSING

PROBLEM - NITRAMINE CONTAINING GUN PROPELLANTS SUCH AS LGVA AND GAU-8 PRUP ARE PRESENTLY PRODUCED BY A DISCONTINUOUS, MANPOWER INTENSIVE, INEFFICIENT BATCH PROCESS. PRODUCT UNIFORMITY IS DIFFICULT TO OBTAIN DUE TO IMPRECISE CONTROLS.

SOLUTION - DEVELOP A CONTINUOUS PROCESSING OPERATION FOR THE MANUFACTURE OF LGVA AND OTHER NITRAMINE PRPELLANTS BY THE USE OF NOS SCREW EXTRUDER, AUTOMATIC FEEDS AND CUTTERS WILL DECREASE COST AND IMPROVE SAFETY.

IMPLEMENT -- MULTI-BASE				

(4688) TITLE - SOLVENT STICK PROPELLANT PROCESSING CHARACTERIZATION

PROBLEM - BLENDING OF TRIPLE BASE, SOLVENT STICK PROPELLANT IS REQUIRED TO ASSURE ACROSS-THE-LET BALLISTIC UNIFORMITY. EACH STAGE OF MANUAL BLENDING ADDS APPROXIMATELY \$1.50 PER LB TO THE PROPELLANT COST. THREE STAGE BLENDING IS CURRENTLY SPECIFIED.

SOLUTION - IMPROVING BATCH-TO-BATCH UNIFORMITY CAN REDUCE THE NUMBER OF BLENDING STAGES REQUIRED THUS REDUCING THE COST OF AN AUTOMATED BLENDING FACILITY AS WELL AS PROPELLANT UNIT COST. A NUMBER OF SPECIFIC FACTORS WILL BE EVALUATED.

(4713) TITLE - 120MM COMBUSTIBLE CASE BODY REMOVAL SYSTEM

PROBLEM - A POTENTIAL SAFETY PROBLEM CURRENTLY EXISTS IN THE COMBUSTIBLE CASE MOLDING AREA ON THE 120MM LINE. THE REMOVAL OF THE CASE BODY FROM THE MALE PRESSING MANDREL IN THIS AREA IS A HAZARDOUS STEP IN THE PRODUCTION OF THE 120MM CASE BODIES.

SOLUTION - TO DESIGN, FABRICATE, INSTALL, AND PROVE-OUT A PNEUMATICALLY CONTROLLED CASE BODY REMOVAL SYSTEM WHICH WILL WORK IN CONJUNCTION WITH THE CURRENT PRESSING SYSTEMS ON THE 120MM COMBUSTIBLE CASE LINE.

IMPLEMENT -- NITROCELLULOSE

(4594) TITLE - NITROCELLULOSE (NC) PAPER MANUFACTURING TECHNOLOGY

PROBLEM - CURRENTLY THE NC MFG BASE IN THIS COUNTRY HAS BEEN LIMITED TO SMALL LOT PRODUCTION. SINCE THE CONTRACTOR DOES NOT WANT TO UPGRADE HIS FACILITIES FOR A PADD SOURCE, THE GOVT IS COMMITTED TO ESTABLISHING AN NC PAPER MFG BASE TO MEET PROJECTED NEED.

SOLUTION - THIS PROJECT WILL DEVELOP MFG TECHNIQUES, DEFINE SPECIFICATIONS AND SOP REQUIREMENTS, IDENTIFY THE NC PAPER MFG PARAMETERS AND HARDWARE OPERATIONAL REQUIREMENTS TO SUPPORT OPERATION OF THE PAPER MANUFACTURING LINE.

(4690) TITLE - IMPROVED DEHYDRATION OF NITROCELLULOSE

PROBLEM - TWO METHODS ARE USED FOR ALCOHOL DEHYDRATION OF NC. ALCOHOL PRESS DEHYDRATION PRODUCES A TIGHTLY COMPACTED BLOCK WHICH MUST BE BROKEN BY MECHANICAL MEANS, RESULTING IN LUMPS OF NC WHICH ARE DIFFICULT TO SOLVATE. THERMAL DEHY, 2ND METHOD, USES HI ENERGY.

SOLUTION - IMPROVED METHODS FOR NC DEHY WILL BE EVALUATED WITH EMPHASIS ON SCREW EXTRUSION AND CENTRIFUGAL OPERATION. THESE OPERATIONS AS WELL AS OTHER LATEST TECH WILL BE INVESTIGATED TAKING INTO ACCOUNT THE SOLVENT SYSTEMS PRESENTLY USED FOR PROP PROCESSES.

(4703) TITLE - MFG PROCESSES FOR CASELESS PROPELLANTS

PROBLEM - THE DEVELOPMENT OF AN ADVANCED COMBAT RIFLE HAS BEEN INITIATED WHICH WILL USE CASELESS AMMUNITION. PRIOR TO PLANT CONSTRUCTION, MANUFACTURING PROCESSES MUST BE DEFINED AND PROVEN ON A PILOT LINE.

SOLUTION - R&D PROJECTS ARE PRESENTLY DEFINING PROPELLANT CONFIGURATION AND PRELIMINARY PROCESS LAB EQUIPMENT. THIS PROJECT WILL CULMINATE IN A COMPLETELY TESTED PILOT LINE WHICH WILL BE USED FOR THE PRODUCTION OF TEST QUANTITIES.

COMPONENT -- NITROGUANIDINE

(4427) TITLE - UN-LINE ANALYZERS FOR NITROGUANIDINE PLANT

PROBLEM - A NITROGUANIDINE MFG FACILITY IS BEING CONSTRUCTED AT SUNFLOWER AAP. HMT 5 78 4447 INDICATED THE FEASIBILITY OF AUTOMATED ON-LINE INSTRUMENTATION FOR PROCESS STREAM CHEMICAL ANALYSIS. HOWEVER THE RELIABILITY HAS NOT BEEN DEMONSTRATED.

SOLUTION - INSTALL AND EVALUATE AN ON-LINE ION CHROMATOGRAPH, A GAS CHROMATOGRAPH, AND A SPECTROPHOTOMETER IN THE FACILITY WHICH IS TO BE BUILT BEGINNING IN FY85.

COMPONENT -- CALCIUM CYANAMIDE PROCESS CONTROL

PROBLEM - IN THE MFG OF HQ THE INTERMEDIATE CHEMICAL CALCIUM CYANAMIDE IS PRODUCED CONTINUOUSLY BY REACTING RAW MATERIALS. WIDELY VARYING IMPURITIES IN THE FEED HAVE NEGATIVE EFFECT ON THE KILN OPS. SUCH AS SINTERING AND ULTRAPRESSES WHICH CREATE OUST HAZARDS.

SOLUTION - STUDY THE INTERACTION BETWEEN KILN OPERATING CONDITIONS, RECYCLE OF CALCIUM CYANAMIDE AND IMPURITIES IN THE FEED ON SINTERING, YIELD AND PRODUCT QUALITY USING EXISTING LABORATORY SCALE KILNS AT SAAP. RESULTS WILL BE USED TO INCREASE YIELD + QUAL.

COMPONENT -- SINGLE BASE

(4575) TITLE - COMBINED CPD, MIX AND EXTRUSION FOR S.B. PROPS

PROBLEM - BATCH MANUFACTURE OF SINGLE BASE PROPELLANTS REQUIRES OPERATIONS WHICH ARE LABOR INTENSIVE, DIFFICULT TO CONTROL AND HAZARDOUS TO THE OPERATORS.

SOLUTION - THIS PROJECT WILL PROVIDE PROTOTYPE EQUIPMENT TO IMPROVE, SIMPLIFY AND COMBINE OPERATIONS IN BATCH PROCESSING OF SINGLE BASE PROPELLANTS TO REDUCE COST AND OPERATOR HAZARDS.

Small Caliber -----	127

WEAPONS PROGRAM

The major portion of the weapons related MMT projects are conducted by two AMCCOM arsenals; Watervliet Arsenal (WVA) and Rock Island Arsenal (RIA). The main emphasis of their programs is the modernization and upgrading of operations through the REARM program. The purpose is to reduce costs and improve product quality by taking advantage of the advances in metalworking technology.

Many of the projects planned for FY 84-88 at Watervliet Arsenal are related, in whole or in part, to the handling and fixturing of cannon tubes and their components. Since many items produced at Watervliet are large, complex and/or require close tolerances, the setup and movement time are important cost drivers.

A major cost driver at WVA is metal removal. Since the alloys used in weapons are expensive and difficult to work, producing components close to final shape will reduce the cost and time required for finishing. Methods being explored include hot isostatic pressing (HIP) and rotary forging. Projects are also proposed to improve the metal removal process. High speed metal removal is addressed in several projects. One such project addresses energy adaptive grinding which makes full use of the cutting capacity of the abrasive wheel. Some of the other areas in the Watervliet submission include computer integrated manufacturing, computer-aided manufacturing, non-traditional surface hardening methods, chromium plating, tantalum coating, and electropolishing to reduce fatigue failures in gun tubes.

Cost reductions and productivity increases in manufacturing continue to be the prime objectives of MMT at Rock Island Arsenal. Because RIA is a job-shop organization, administration and planning overhead is a significant cost driver. By developing an integrated computer-aided manufacturing/management information system the Arsenal will be able to efficiently control all operations from receipt of an order to delivery of the product. Some of the management areas addressed include process modeling, performance measurement, computer-aided work measurement system, and online production information system. Cost benefits are also expected from improved material handling and in-process control projects which are tied into the overall CAM/MIS effort at RIA. Efforts in this area include robot loading of machines and automated process control.

Since RIA's task is primarily metalworking, there are several projects included in this area. While all efforts will in themselves reduce costs, coupling with the Arsenal's overall CAM/MIS will further increase the benefits. Some of the areas covered include automated control of foundry melt composition, automated forging centers, and a study to establish a flexible machining system.

(e424) TITLE - AUTOMATIC/RUBBUTIC WELDING OF WEAPON COMPONENTS (CAM)

PROBLEM - THE REPAIR OF DEFECTIVE WELDS ARE FREQUENTLY EXPERIENCED. REPAIR REQUIREMENTS ARE OFTEN TRACED TO THE SKILL LEVEL OF THE WELDING OPERATORS.

SOLUTION - ADAPTIVE CONTROLS ARE BEING USED IN AN INCREASING NUMBER OF WELDING APPLICATIONS TO DEEMPHASIZE OPERATOR SKILL IN MAKING CONSISTENT PRODUCT. SUCH FEEDBACK CONTROL ROBOTS SHOULD BE USED ALSO IN WEAPONS FABRICATION.

(e501) TITLE - NON-ROTATION METHODS OF FRICTION WELDING

PROBLEM - ROTATIONAL FRICTION WELDING IS CONFINED TO APPLICATIONS IN WHICH AT LEAST ONE OF THE TWO PIECES TO BE JOINED HAS A CIRCULAR OR NEAR-CIRCULAR CROSS SECTION.

SOLUTION - NON-ROTATION FRICTION WELDERS SUCH AS URBITAL AND OSCILLATORY TYPES ARE NOW AVAILABLE WHICH OVERCOME RESTRICTIONS ON SHAPE.

(e552) TITLE - ARMCAM FOR FUTURE CAM ACTIVITIES

PROBLEM - IN CONDUCTING SEPARATE EFFORTS ON CAM, IT CAN BE EXPECTED THAT PURCHASED EQUIPMENT MAY NOT BE FULLY UTILIZED OR SOFTWARE MAY NOT BE COMPATIBLE WITH VARIOUS CAM SYSTEMS USED BY DIFFERENT ARMY INSTALLATIONS AND SUPPLIERS.

SOLUTION - DEVELOP A MASTER PLAN FOR ARMY CAM ACTIVITIES. IT WILL OUTLINE MEDIUM TO LONG-RANGE GOALS FOR FURTHER CAM APPLICATION AND DETERMINE WHAT MFJ AREA'S REQUIRE MORE EMPHASIS.

(e601) TITLE - STATE-OF-THE-ART LADLE/FURNACE REFINING

PROBLEM - THERE ARE NO PROVISIONS IN PROJECT 6838251, IMPROVED MELTING PRACTICES, TO IMPLEMENT TECHNIQUES THAT REQUIRE PURCHASE OF MAJOR ITEMS SUCH AS AN ARGON OXYGEN CARBURIZATION FURNACE.

SOLUTION - THIS PROJECT WILL BE USED TO INSTALL NEW FURNACE/LADLE EQUIPMENT. THE BEST PROCESS PARAMETERS WILL BE DETERMINED AND CONTROLS WILL BE EVALUATED.

(e7-4) TITLE - ROBOTICS FOR CLEANING CASTINGS

PROBLEM - CLEANING THE LASTINGS AND REMOVING THE GATES AND RISERS IS LABOR INTENSIVE AND MUST BE NELLED TO POSITION THE CASTINGS. THE CASTINGS ARE OFTEN DAMAGED FROM FREQUENT REPOSITIONING. GRINDING OF GATES AND RISERS CREATES A HAZARDOUS ENVIRONMENT.

SOLUTION - USE A ROBOTIC SYSTEM FOR CLEANING AND REMOVING THE GATES AND RISERS. THE PRODUCTIVITY WILL IMPROVE. CASTINGS WILL NOT HAVE TO BE REPAIRED OR REJECTED AS FREQUENTLY. AND WORKERS WILL NOT BE EXPOSED TO THE HOSTILE ENVIRONMENT.

HAT FIVE YEAR PLAN
ACS DRAFT 126

COMPONENT -- INFORMATION SYSTEM	TITLE -- BINARY CUTTER LOCATION EXCHANGE (CAM)	FUNDING (\$000)				
		64	65	66	67	68

(610) TITLE -- INFORMATION SYSTEM

(610) TITLE -- BINARY CUTTER LOCATION EXCHANGE (CAM)

PROBLEM - USE OF THE INEFFICIENCIES OF NC IS ASSOCIATED WITH THE UNIQUE POST PROCESSORS REQUIRED FOR DIFFERENT MACHINE TOOLS.

SOLUTION - THIS PROJECT WILL UPGRADE WATERVLIET ARSENALS NC PROGRAMMING CAPABILITY TO PRODUCE BINARY CUTTER LOCATION (BCLI) DATA. BCL PROCESSING OFFERS A SOLUTION TO THE POST PROCESSING PROBLEM.

(6637) TITLE -- SIMULATION + MODELING OF PROTO MFG - WEAPONS + FIRE CONTROL

PROBLEM - THE CURRENT PROCEDURES ASSOCIATED WITH BUILDING AND TEST PROTOTYPES TO VERIFY THEIR CONFORMANCE TO SPECIFICATIONS AND PERFORMANCE REQUIREMENTS ARE EXPENSIVE AND LENGTHY.

SOLUTION - ESTABLISH & COMPUTER SIMULATION AND MODELING FACILITY TO OPTIMIZE DESIGN, MANUFACTURING PROCESSES, AND MANUFACTURING SYSTEM.

COMPONENT -- INFORMATION SYSTEMS

(6132) TITLE -- PERFORMANCE MEASUREMENT PARAMETERS FOR GOOD MFG.

PROBLEM - MEASURING THE PERFORMANCE OF A GOVERNMENT MANUFACTURING OPERATION IS DIFFICULT. GOOD OPERATIONS, ALTHOUGH PARTIALLY COMPETITIVE, ARE NOT IN A FULLY COMPETITIVE MARKETPLACE. ACCOUNTING DATA BY ITSELF IS NOT SUFFICIENT TO MEASURE PERFORMANCE.

SOLUTION - DEVELOP A SERIES OF MEASUREMENTS THAT COMBINE ACCOUNTING DATA AND PRODUCTION DATA TO ADEQUATELY ASSESS PERFORMANCE. INCLUDE DATA ON TECHNICAL IMPROVEMENTS, INFLATION, PRODUCT COST, ETC. MEASUREMENTS WILL BE USEFUL IN LONG RANGE PLANNING.

(6305) TITLE -- INTEGRATED MANUFACTURING SYSTEM (ICAM)

PROBLEM - MI SYSTEMS ARE APPLIED LOCALLY BUT THERE IS NO DATA MANAGEMENT SYSTEM FOR THE ENTIRE MFG ACTIVITY. THIS INCREASES COST DUE TO LONG LEAD TIMES, SCHEDULE INTERRUPTIONS AND SHORTAGES OF MACHINE AVAILABILITY, LABOR AND MATERIAL.

SOLUTION - DEVELOP AN MIS WHICH ADDRESSES ACTIVITIES OF ALL DIRECTORATES, SUPPORTIVE TO MANUFACTURING AT RIA. THE SYSTEM WILL USE STATE-OF-THE-ART TECHNOLOGY TO DELINATE OPTIMUM SCHEDULING AND PIN POINT POTENTIAL PROBLEM AREAS FOR EASIER RESOLUTION.

(6366) TITLE -- ON-LINE PRODUCTION INFORMATION SYSTEM (CAMI)

PROBLEM - THE MANUFACTURING DATA BASE CANNOT BE ACCESSED THROUGH AN ON-LINE DATA BASE SYSTEM, MAKING INTEGRATION OF AUTOMATED SYSTEMS FOR PROCESS PLANNING, TIME SLOTS GENERATION, FACILITIES/MOBILIZATION PLANNING AND PRODUCTION CONTROL SIMULATION DIFFICULT.

SOLUTION - DEVELOP THE MANUFACTURING DATA BASE FROM ITS PRESENT BATCH ORIENTATED ENVIRONMENT TO AN UN-LINE SYSTEM.

(CONTINUED)

1636C) TITLE - ESTABLISHMENT OF ZINC ION VAPOR DEPOSITION PROCESS

PROBLEM - REPLACEMENT OF ELECTROPLATING ON WEAPON COMPONENTS IS REQUIRED TO AVOID HYDROGEN EMBRITTLEMENT OF PLATED FERROUS PARTS HAVING A HARDNESS ABOVE ROCKWELL C40 AND TO AVOID THE DISCHARGE OF CYANIDES AND HEAVY METALS IN EFFLUENTS.

SOLUTION - THE ZINC ION VAPOR DEPOSITION PROCESS PROVIDES A LOW COST, HIGH PERFORMANCE CORROSION PROTECTION TO STEEL AND ALUMINUM ALLOYS. NEITHER THE COATING NOR THE COATING PROCESS PRESENT ECOLOGY PROBLEMS.

1640C) TITLE - WARM FORGING OF WEAPON COMPONENTS (CAM)

PROBLEM - EXCESSIVE ENERGY IS CONSUMED IN CONVENTIONAL FORGING. ALSO DIE LIFE IS SHORTENED BY HIGH FORGING TEMPERATURES AND BY OXIDATION.

SOLUTION - BY USING CAD/CAM TECHNIQUES FOR DIE DESIGN, FORGING WILL BE DONE AT MUCH LOWER TEMPERATURE AND THE FINAL PARTS WILL HAVE BETTER MECHANICAL PROPERTIES

1642C) TITLE - DESIGN CRITERIA FOR HARDENING (CAM)

PROBLEM - SELECTION OF THE BEST HARDENING PROCESS, INCOMPLETE HARDENING THROUGHOUT THE COMPLEMENT AND COMPLICATIONS CAUSED DURING THE HEAT TREATMENT OF MÉDMENTS ARE REURRING PROBLEMS CURRENTLY ADDRESSED BY EMPIRICAL METHODS.

SOLUTION - THE RELATIONSHIPS OF DIFFERENT VARIABLES SUCH AS QUENCH RATES, COMPONENT SIZE, SHAPE, AND COMPOSITION WILL BE ESTABLISHED. A COMPUTER WILL BE PROGRAMMED TO FURNISH THE NECESSARY INFORMATION

1650C) TITLE - ELECTRO-MECHANICAL JOINING TECHNIQUES

PROBLEM - PURELY MECHANICAL (FRICITION WELDING) OR MOSTLY ELECTRICAL (RESISTANCE) WELDING MACHINES OF VARIOUS TYPES WOULD HAVE TO BE LARGE AND WOULD TAKE EXCESSIVE TIME TO WELD JOINT AREAS 25 SQUARE INCHES OR MORE.

SOLUTION - COMBINING THE FEATURES OF BOTH METHODS TO DELIVER SUFFICIENTLY LARGE SPECIFIC ENERGY FOR WELDING OF LARGE PARTS

1659C) TITLE - COMPUTERIZED FOUNDRY MELT COMPOSITION CONTROL (CAM)

PROBLEM - PRESENT METHODS FOR DETERMINING THE MELT CHARGE ARE INEFFICIENT + INCREASE MELT TIME CONSUME EXCESS ELECTRICITY AND ELECTRODES THEREWITH INCREASING COSTS.

SOLUTION - INSTALL COMPUTER CURTAKS TO MONITOR THE MELT AND ELECTRIC POWER AND ELECTRODE THI RESULT WILL BE MORE ACCURATE COMPOSITIONS AND POWER TEMPERATURES. THE RESULT WILL BE LOWER COST CHARGES + LESS ENERGY AND ELECTRODE CONSUMPTION.

(d513) TITLE - MICROWAVE CURING OF FURAN EPOXYD SAND

PROBLEM - CURE RATE OF FURAN BOND SCALES DEPENDS ON THE ACID CATALYST/RESIN RATIO AND THE SIZE AND TEMP OF THE MOLD. SINCE PON RATES ARE HIGH, SOME RATIOS CANNOT BE USED WHILE USEABLE RATIOS ARE A COMPROMISE BETWEEN VALUES FOR LARGE AND SMALL MOULDS.

SOLUTION - USE MICROWAVE HEATING TO CHANGE THE CURE CHARACTERISTICS OF SELECTED RESIN-CATALYST SYSTEMS TO COMPENSATE FOR DIFFERENT SIZES OF MOULDS. THIS WILL PERMIT A MORE UNIFORM PRODUCTION RATE.

(d515) TITLE - APPLICATION OF WIDE AREA PLUNGE GRINDING

PROBLEM - CONVENTIONAL MACHINING OF WORKPIECES WITH MULTIPLE DIAMETERS AND BLENDED TAPERS AND RADII REQUIRES MANY OPERATIONS AND IS SLOW AND COSTLY.

SOLUTION - USE A WIDE GRINDING WHEEL WHOSE FACE IS DRESSED TO THE REQUIRED PROFILE AND PRODUCE THE FINISHED PIECE IN ONE OPERATION BY PLUNGE GRINDING TO SIZE.

(d522) TITLE - LASER SURFACE ALLOYING PROCESS FOR IMPROVED WEAR RESISTANCE

PROBLEM - COMPONENT PARTS OF WEAPON SYSTEMS SUBJECT TO EXTENDED OPERATIONS ARE EXPERIENCING EXCESSIVE WEAR THAT JEOPARDIZES THE DRIVE TOWARD HIGH PERFORMANCE CAPABILITY.

SOLUTION - MARGINALLY WEAR RESISTANCE COMPONENT PARTS CAN BE SUBSTANTIALLY UPGRADED BY LASER SURFACE ALLOYING WITH HARDFACING MATERIAL DESIGNED TO IMPROVE ITS WEAR RESISTANCE.

(d523) TITLE - ION IMPLANTATION OF WEAPUN COMPONENTS

PROBLEM - COMPONENT PARTS OF WEAPON SYSTEMS SUBJECT TO EXTENDED OPERATIONS ARE EXPERIENCING EXCESSIVE WEAR THAT JEOPARDIZES THE DRIVE TOWARD HIGH PERFORMANCE CAPABILITY.

SOLUTION - MARGINALLY WEAR RESISTANCE COMPONENT PARTS CAN BE SUBSTANTIALLY UPGRADED BY ION IMPLANTING ELEMENTAL SPECIES DESIGNED TO IMPROVE ITS WEAR RESISTANCE.

(d534) TITLE - CONSERVATION OF ENERGY IN PROCESSING OF WEAPUNS COMPONENTS

PROBLEM - PRESENT HEAT TREAT TECHNIQUE AND SELECTION OF HEAT TREAT EQUIPMENT RELIES ON PAST EXPERIENCE AND IS NOT BASED ON SCIENTIFIC CALCULATIONS.

SOLUTION - EVAL PRESENT TECHNIQUES AND EQUIPMENT. DEVELOP COMPUTER-AIDED-MODULAR METHOD TO PREDICT MIN TIME READ TO HEAT A PART. DEVELOP MODELS TO CLAPARE COSTS TO HEAT A GIVEN PART BY VARIOUS MEANS (GAS, INDUCTION, RESISTANCE, ETC).

(CONTINUED)							
(6651) 1	TITLE - AUTOMATIC WELDING	PROBLEM - PRODUCTIVITY IN THE WELD SHOP IS LIMITED BECAUSE THE MAJORITY OF THE WELDING IS DONE MANUALLY.	SOLUTION - MULTIPLE AXIS AUTOMATIC WELDERS INTEGRATED WITH MULTIPLE AXIS PART HANDLING SYSTEMS, PELLETIZING, PREHEAT FURNACES, STRESS RELIEVING OVENS, AND FIXTURING CAN REDUCE COSTS WHILE IMPROVING RATES.	190	150	50	60
(CONTINUED)							
(6652) 1	TITLE - RING ROLLING OF WEAPUN COMPONENTS	PROBLEM - COMPONENTS WITH RING LIKE SHAPE OFTEN REQUIRE EXTENSIVE METAL REMOVAL OVER ALMOST THE ENTIRE SURFACE BECAUSE TUBING OF THE OPTIMUM SIZE FOR RING MATERIAL IS NOT AVAILABLE. THIS INCREASES PRODUCTION COSTS.	SOLUTION - SIMPLE SHAPED RINGS WITH LITTLE EXCESS MATERIAL WILL BE SHAPED ON SPECIAL RING ROLLING EQUIPMENT TO NEAR NET SHAPE.	150	150	50	60
(CONTINUED)							
(6653) 1	TITLE - AUTOMATED ANALYSIS AND CONTROL OF PLATING BATHS	PROBLEM - PERIODIC MET CHEMISTRY ANALYSIS OF PLATING BATHS IS REQD TO MAINTAIN PROPER CHEMICAL BALANCE. THE TIME LAG BETWEEN ANALYSIS AND USE IS A DETRIMENTAL FACTOR.	SOLUTION - APPLY AUTOMATED ANALYTICAL EQUIPMENT FOR THE CONTINUOUS MONITORING OF BATH COMPOSITIONS AND FOR THE AUTOMATIC ADDITION OF THE REQU INGREDIENTS. THIS EQUIPMENT WILL IDENTIFY IMPURITIES IN THE BATH AND ALSO CHECK MASTERNER.	120	120	50	60
(CONTINUED)							
(6654) 1	TITLE - PLATED METALS FOR NONFERROUS COMPONENTS	PROBLEM - RUCK ISLAND ARSENAL MUST CAST SMALL PARTS FROM AL OR CU ALLOYS THAT ARE NOT VERY CASTABLE. SHRINKAGE, HOT TEARING AND OXIDES CAUSE UNSOUND CASTINGS WITH ATTENANT LOW ACCEPTANCE RATES.	SOLUTION - IMPROVE ACCEPTANCE BY MANUFACTURING THE PROBLEM COMPONENTS FROM POWDERED METAL. COMPARE PROPERTIES OF PM PARTS WITH CAST PARTS. DETERMINE IF ADDITIONAL PROCESSING SUCH AS HIP IS NEEDED AND PERFORM AN ECONOMIC COMPARISON.	120	120	50	60

HMT FIVE YEAR PLAN

COMPONENT -- PROCESSES

PROBLEM - MANUAL WELDING IS LARGELY DEPENDENT ON INDIVIDUAL TECHNIQUE. QUALITY AND APPEARANCE OF THE WELD VARY. WELDING IS HAZARDOUS. PROTECTIVE MEASURES ARE REQUIRED TO MINIMIZE RISK OF TOXIC FUMES AND OF BURNS OR EYE INJURY.

SOLUTION - A ROBOTIC WELDING SYSTEM WILL BE SPECIFIED AND PROCURED. THE REQUIREMENTS FOR THE WELDING SYSTEM WILL BE DETERMINED BY THIS REPORT.

PROBLEM - CONTINUOUS SEMI-AUTOMATED MACHINING OPERATIONS, CUTTING RATES ARE LOWERED TO AVOID TOOL BREAKAGE AND REJECTION OF CLIPPERMENTS. MACHINING PARAMETERS ARE SET BY ALLOWING FOR HOIST DUSTLESS CONDITIONS.

SOLUTION - ESTABLISH AN IN-PROCESS INSPECTION AND CONTROL SYSTEM DIRECTED TOWARD DRILLING, REMING, TAPPING, BORING, INTERNAL GRINDING, AND HONING. THE AUTOMATED, COMPUTERIZED MACHINING SYSTEM WILL INTEGRATE THESE OPERATIONS.

PROBLEM - THE USABLE LIFE OF AUTOMATIC WEAPONS BETWEEN DEPOT REBUILDS IS PRIMARILY DEPENDENT UPON CRACK PROPAGATION FROM CYCLIC LOADING. IN ORDER TO EXTEND THIS LIFE IT IS NECESSARY TO INCREASE THE FATIGUE RESISTANCE OF THE MATERIALS APPLIED TO MANUFACTURE.

SOLUTION - POTENTIAL FOR SIGNIFICANTLY IMPROVED LIFE OF RAPID FIRE WEAPONS IS PROVIDED THROUGH APPLICATION OF STATE-OF-THE-ART TECHNOLOGY IN INCLUSION OF THE STEEL.

卷之三

TITLE - INVESTMENT CASTING OF LARGE WEAPON COMPONENTS

PROBLEM - CONVENTIONAL CASTING RESULTS IN LOW YIELD. THE PARTS USUALLY HAVE LARGE RISERS AND EXTENSIVE GATES THAT CONSUME METAL. MACHINED SURFACES REQUIRE EXTENSIVE MACHINING. THE INACCURATE TOLERANCES ON NMACHINED SURFACES CHARGE ADDITIONAL MACHINING COST.

SOLUTION - INVESTMENT CASTING WILL BE USED FOR LARGER AND MORE COMPLEX PARTS. THIS PROCESS WILL INCREASE THE YIELD, SAVE MONEY BY ELIMINATING WORK FOR REMOVING GATES AND RISERS, REDUCE MACHINING, AND REDUCE THE WEIGHT OF SOME

卷之三

PROBLEM - CASTINGS ARE NORMALLY Poured IN LARGE SAND MOLDS WHICH EXPAND AND SHIFT AS THEY ARE HEATED BY THE MOLTEN METAL. THE PROCESS YIELDS A CASTING LARGER THAN NECESSARY. EXCESS MACHINING HAS TO TAKE PLACE.

SOLUTION - USING THE SMELL MOLDING PROCESS, THE MOLTEN METAL IS Poured INTO THIN SHELLS OF BLURRED SAND. THESE SHELLS ARE RIGID SO THAT THE FINAL CASTING IS CLOSER IN DIMENSIONS TO THE DRAWING. MACHINING AND WEIGHT ARE REDUCED.

PROBLEMS -- PROCESSES

(CONTINUED)

(e710) TITLE - AUTOMATED CONTROL OF CUTTING FLUID CONCENTRATION LEVEL

PROBLEM - THE EFFECTIVENESS OF ANY CUTTING FLUID IN A PARTICULAR MACHINING OPERATION IS DEPENDENT ON MAINTAINING THE PROPER CONCENTRATION LEVEL DURING THE TIME THE FLUID IS IN THE MACHINE. AT THE PRESENT TIME, VARIATIONS ARE QUITE COMMON.

SOLUTION - A SINGLE MACHINE, OPERATING FROM ITS OWN SUMP, OR A SERIES OF MACHINES OPERATING FROM A CENTRAL CUTTING FLUID SYSTEM, WILL BE MONITORED SO THAT THE CONCENTRATION LEVEL CAN BE READILY CONTROLLED ON A CONTINUOUS BASIS.

(e711) TITLE - DISPOSITION OF SPENT CHROMIC ACID PLATING SOLUTION

PROBLEM - THE DISPOSITION OF SPENT CHROMIC ACID PLATING SOLUTION IS DIFFICULT BECAUSE OF POLLUTION CONTROL RESTRICTIONS ON HAZARDOUS WASTES. IT IS ALSO EXPENSIVE IF PERFORMED IN-HOUSE SINCE THE COST OF DESTROYING CHROME IS 3 TIMES THE PURCHASE PRICE.

SOLUTION - THE APPLICATION OF MODERN CHROMIC ACID RECOVERY OR REPROCESSING TECHNIQUES COULD RESULT IN A REDUCTION IN BOTH THE AMOUNT OF CHROMIC ACID PURCHASED AND DESTROYED.

(e712) TITLE - INDUCTION HARDENING BY THE SCANNING PROCESS

PROBLEM - THE CURRENT INDUCTION HARDENING PROCESS DOES NOT PRODUCE UNIFORM CASE DEPTHS NOR DOES IT ACHIEVE UNIFORM CONFIGURATION CONTROL OF LUNETTES FOR THE M101A1, M196 AND M102 WEAPUN SYSTEMS. THE QUALITY OF THE PROCESS IS SUSPECT.

SOLUTION - IT IS BELIEVED THAT USE OF A SCANNING TYPE OF INDUCTOR WILL PRODUCE A MORE UNIFORM CASE DEPTH AND BETTER CONFIGURATION CONTROL. THIS WILL IMPROVE THE RELIABILITY AND QUALITY OF THE PRODUCT.

(e713) TITLE - APPLICATION OF METALLIDING

PROBLEM - PARTS OF WEAPONS SYSTEM REQUIRE CORROSION OR WEAR RESISTANCE. MATERIAL AND APPLICATION PROCESSES IN USE ARE DIFFICULT AND EXPENSIVE TO APPLY.

SOLUTION - USE METALLIDING COATING ON LOW COST ALLOYS TO PROVIDE SURFACE MODIFICATIONS REQUIRED FOR ACID RESISTANCE.

TOOLING -- TOOLING

(e714) TITLE - IMPROVED UTILIZATION OF NEW GENERATION MACHINE TOOLS

PROBLEM - CURRENT MACHINING PRACTICES UTILIZE METHODS FROM THE PRECOMPUTER AIDED ERA. NEW METHODS AND PRODUCTIVITY DEMANDS REQUIRE IMPROVED UTILIZATION AND IMPROVED TOOL LIFE.

SOLUTION - DEVELOP IN-LINE MEASUREMENT SYSTEMS TO DERIVE RELATIONSHIPS FOR METAL REMOVAL IMPROVEMENTS.

HMT FIVE YEAR PLAN

FUNDING (\$000)

IMPLEMENT -- TULING

(CONTINUED)

(1670) TITLE - HELD REPAIR AND MAINTENANCE OF HSS TULING

PROBLEM - DAMAGED OR RUIN TULING IS DISCARDED BECAUSE OF COST AND IMPRACTICALITY OF REGRINDING.

SOLUTION - DEVELOP A SPECIAL WELDING TECHNIQUE FOR REPAIR OR REBUILD OF THESE TULS.

(1672) TITLE - CUTTING TOOL TECHNOLOGY

PROBLEM - CURRENT MACHINE TOOLS ARE STATE-OF-THE-ART. CUTTING TUGLS IN INVENTRY LAG BEHIND IN ABILITY TO MAINTAIN PRODUCTIVITY AVAILABLE IN NEW MACHINE TOOLS.

SOLUTION - MAXIMIZE PRODUCTIVITY BY MATCHING CAPABILITIES OF CUTTING TOOLS TO MACHINE TOOLS.

• AT E G U R Y •

•LARGE CALIBER •

116

IMPLEMENT -- BREECH MECHANISMS

(1674) TITLE - CONTROLLED GRAIN SIZE CASTINGS, PRODUCTION AND HEAT TREAT

PROBLEM - FINE GRAIN LASTINGS HAVE DEMONSTRATED AN IMPROVEMENT IN LOW CYCLE FATIGUE LIFE BY A FACTOR OF TWO TO FOUR. IT IS EXPECTED THAT A HEAT TREATMENT WILL EXTEND THE LIFE STILL FURTHER.

SOLUTION - PROVIDE FOR CASTING A BREECH BLOCK BY ONE OF THE AVAILABLE TECHNIQUES THEN OPTIMIZE THE HEAT TREATMENT FOR THE CHOSEN ALLOY. LIFE IMPROVEMENTS WILL BE DEMONSTRATED.

(1675) TITLE - MANUFACTURING OF MULTI-LUG BREECH MECHANISMS

PROBLEM - THE MANUFACTURE OF MULTI-LUG COMPONENTS INVOLVES THE USE OF FORM CUTTERS WHICH ARE USED TO MILL THE REQUIRED CONFIGURATION. ALTHOUGH THIS METHOD HAS BEEN SUCCESSFUL ON A PROTOTYPE BASIS, IT DOES NOT APPEAR TO BE FEASIBLE FOR PRODUCTION QUANTITIES.

SOLUTION - INVESTIGATE ALTERNATIVE METHODS OF MANUFACTURING MULTI-LUG BREECH COMPONENTS, SUCH AS ERUACHING AND SKINNING.

COMPONENT -- RECOIL MECHANISMS	TITLE -- MINE FORMING OF RECOIL CYLINDERS	FUNDING (\$000)					
		PRIOR	84	85	86	87	88
	(CONTINUED)						220

PROBLEM - REPLACEMENT OF SCARRED, WORN OR MISMACHINED RECOIL CYLINDERS ARE COSTLY AND TIME-CONSUMING IN TERMS OF LONG-LEAD TIMES FOR MATERIAL DELIVERY AND MACHINING. CYLINDER REPLACEMENT REQUIRES ADDITIONAL CONSUMPTION OF STRATEGIC MATERIALS.

SOLUTION - MINE FURNISHING IS A SIMULTANEOUS PROCESS WHERE MUNGING AND MATERIAL BUILDOUT BY ELECTROPLATING TAKE PLACE TO ACHIEVE THE DESIRED DIMENSION AND FINISH. COST SAVINGS CAN BE ACHIEVED WITH THE PROCESS FOR RECOIL CYLINDER MANUFACTURE AND RECLAMATION.

(e511) TITLE - CASTING OF ANTI-FRICTION METAL COMPONENTS

PROBLEM - ANTI-FRICTION METAL FOR PACKING GLANDS IN RECOIL MECHANISMS IS PRESENTLY HAND CAST. OVER 70-80 PERCENT OF THE METAL IS EXCESS + HAS TO BE MACHINED OFF AT AVOID COST.

SOLUTION - USE OF DIE CAST PROCESS WILL REDUCE EXCESS METAL AND THE PROCESS WILL REDUCE CASTING DEFECTS.

(e607) TITLE - AUTOMATED FLUSHING OF RECOIL SYSTEMS TO REDUCE CONTAMINATION

PROBLEM - INEFFECTIVE CLEANING OF MACHINED SURFACES CAUSES METALLIC CONTAMINATION OF THE HYDRAULIC FLUID AFTER THE RECOIL SYSTEM IS ASSEMBLED. SUCH CONTAMINANTS ARE DIFFICULT TO REMOVE WITH NORMAL FLUSHING PROCEDURES.

SOLUTION - ESTABLISH AN AUTOMATED FLUSHING SYSTEM INCORPORATING HIGH PRESSURE TO REMOVE METALLIC CONTAMINATION FROM THE HYDRAULIC FLUID. THIS WILL REDUCE THE NUMBER OF REJECTIONS OF ASSEMBLED RECOIL MECHANISMS AFTER MECHANICAL GYMNASTICATION.

(e703) TITLE - AUTOMATED RECOIL MECHANISM ASSEMBLY

PROBLEM - ASSEMBLY AND TESTING OF RECOIL MECHANISMS IN SMALL LOTS AT RUCK ISLAND ARSENAL IS A MANUAL, TIME-CONSUMING PROCESS. TECHNOLOGY SUCH AS INDUSTRIAL ROBOTS AND MICROPROCESSOR CONTROLLED TESTING EQUIPMENT CAN IMPROVE THIS PROCESS.

SOLUTION - ANALYZE THE CURRENT MANUAL METHOD OF ASSEMBLING THE HYDRAULIC, PNEUMATIC, AND MECHANICAL PARTS OF RECOIL MECHANISMS. IDENTIFY AREAS WHERE AUTOMATED METHODS CAN BE APPLIED. DEVELOP AND INSTALL THOSE METHODS WHICH PROVE COST EFFECTIVE.

(645) TITLE - IMPROVED RIFLING PROCEDURES

PROBLEM - RIFLING HEADS USED TO HOLD BRUACH CUTTERS IN THE RIFLING OPERATION ARE SUBJECT TO EXCESSIVE WEAR, NECESSITATING SIGNIFICANT MAINTENANCE AND REPAIR EXPENDITURE.

SOLUTION - DESIGN A NEW RIFLING HEAD THAT IS NOT SUBJECT TO WEAR, THEREBY ELIMINATING MAINTENANCE AND REPAIR EXPENDITURE ASSOCIATED WITH RIFLING HEADS.

(646) TITLE - OPTIMAL RIFLING CONFIGURATION FOR CHROME PLATING

PROBLEM - EARLY FAILURE OF CHROMIUM COATINGS IN GUN TUBES OCCURS AT THE SHARP CORNERS OF THE LAND RUN-UP. PRESENTLY NO EFFECTIVE METHOD OR TOOL IS AVAILABLE TO ELIMINATE THIS CONDITION.

SOLUTION - DEVELOP A METHOD AND APPROPRIATE TOOLING TO ALTER THE RIFLING PROFILE OF GUN TUBES.

(647) TITLE - APPL FUSED SALT PROCESS TO COAT TANTALUM ON L CAL LINERS

PROBLEM - PRESENTLY NO FULL SCALE PRODUCTION CAPABILITY EXISTS AT WATERWLIET ARSENAL TO APPLY TANTALUM TO THE I. C. OF LARGE LINERS. THESE COATINGS MUST BE DEPOSITED FROM A FUSED SALT BATH.

SOLUTION - ESTABLISH THE CAPABILITY TO COAT LARGE CALIBER LINERS ON A PRODUCTION BASIS.

(648) TITLE - APPL OF PARTIAL REFRACTORY LINERS TO CANNON TUBES

PROBLEM - FUTURE CANNON TUBES WILL BE SUBJECTED TO HIGHER TEMPERATURE, PRESSURE AND VELOCITY. TUBES AS NOW DESIGNED WILL WEAR OUT MUCH FASTER. PROTOTYPE EQUIPMENT TO INSTALL ADVANCED TECHNOLOGY LINERS IN TUBES NOW EXISTS.

SOLUTION - MODIFY THE EXISTING PROTOTYPICAL FACILITY TO HANDLE ALL CURRENT AND FORESEEN REDUCTION TUBES. INSTALL ADVANCED TECHNOLOGY LINERS USING THIS EQUIPMENT.

(649) TITLE - WIRE E.D.M. MACHINING OF RIFLING BROACHES

PROBLEM - BRUACH CUTTER TEETH ARE FURNISHED BY ROUGH PLUNGE GRINDING USING DURAZON CBN WHEELS. FINISHING IS DONE BY FLAMING STANDARD ALUMINUM OXIDE WHEELS AND GRINDING THE BRUACH TEETH ON THESE WHEELS, WHICH BREAK DOWN FREQUENTLY AND REQUIRE MUCH REGRESS.

SOLUTION - FURN THE BRUACH TEETH VIA LAC CONTROLLED E.D.M.

14549) TITLE - NDI TESTING OF ROTARY FORGED MANDRELS

PROBLEM - MANDRELS FAIL WITHOUT WARNING DURING THE FORGING OPERATION. THERE IS NO METHOD OF DETECTING DEFECTS UNLESS THE MANDREL IS REMOVED FROM THE FORGING MACHINE.

SOLUTION - THE APPLICATION OF AN ULTRASONIC ELECTROMAGNETIC ACOUSTIC TRANSMISSION (EMAT) SYSTEM THAT IS CAPABLE OF INSPECTING THE MANDREL DEFURE, AND AFTER THE FORGING OPERATION WHILE THE MANDREL IS STILL ATTACHED TO THE JAW MOLDEK.

14550) TITLE - ELECTRUPOLISHING TO IMPROVE TUBE FATIGUE LIFE

PROBLEM - STRESS CONCENTRATION AREAS SUFFER FROM AMPLIFIED FATIGUE CRACKING AND ARE THE CAUSE OF EARLY TUBE CNDENATION. THE 15MM M16 KEYWAY SLOT AND THE 103MM M68 BEECH THREAD FEATURES ARE EXAMPLES OF EARLY FATIGUE CRACKING.

SOLUTION - THE REDUCTION OR ELIMINATION OF THE STRESSES WILL BE ACCOMPLISHED BY THE USE OF EXTERNAL ANODES CONFIGURED TO MATCH THE AREA TO BE TREATED.

14551) TITLE - APPLICATION OF REFRACRY + OTHER COAT BY THE SPUTT TECH

PROBLEM - COATING LINERS WITH TANTALUM ELECTRODEPOSITION FROM MOLTEN SALTS INVOLVES HEATING THE SUBSTRATE TO ABOUT 800 DEGREE C. AT THIS TEMPERATURE GUN STEEL UNDERGOS UNDESIRABLE CHANGES IN MECHANICAL PROPERTIES.

SOLUTION - HIGH RATE SPUTTERING IS A TECHNIQUE WHICH CAN BE USED TO DEPOSIT METALLIC COATINGS IN REASONABLE TIME INTERVALS AT SUBSTRATE TEMPERATURES AS LOW AS 70 DEGREE C.

14552) TITLE - APPLICATION OF COUNTER HILDER EQUIPMENT TO ROTARY FORGING

PROBLEM - THE PLANNED INSTALLATION OF AN ADDITIONAL COUNTERHILDER ON THE ROTARY FORGE WILL HAVE AN IMPACT ON THE NC PROGRAMS AND PREFERM DESIGNS.

SOLUTION - PROVIDE ENGINEERING SUPPORT TO DEAL WITH IMPACTS OF THE COUNTERHILDER ACQUISITION ON THE PROCESS.

14553) TITLE - SPRAY ROLLING FOR TUBE MANUFACTURE

PROBLEM - BILLET GUN TUBE AND LINER MFG INVOLVE CLASSICAL WRCUGH INGOT METALLURGICAL PROCESSING THAT ENTAIL LARGE EXPENDITURES OF ENERGY AND SIGNIFICANT MATERIAL CRUPPING LOSSES.

SOLUTION - SPRAY FURNING PROVIDES A NEW APPROACH WHICH POTENTIALLY CUMULINES ECONOMY WITH MATERIAL PROPERTY IMPROVEMENT. THE DIRECT KILLING OF SPRLAT-SPRAYED PRE-FORMULATED METAL POWDERS FULLINED BY CONSOLIDATION THROUGH SAGING OFFERS INVOLVED PROPERTILS.

US ARMY AVIATION SYSTEMS COMMAND

(AVSCOM)

The US Army Aviation Systems Command (AVSCOM) serves as the AMC lead command for current and future Army aviation research, development, and procurement. AVSCOM is headquartered in St. Louis, Missouri with subordinate activities located throughout the country. The Research and Technology Laboratories consist of the Aeromechanics Laboratory at NASA Ames Research Center at Moffet Field, California; the Propulsion Laboratory at NASA Lewis Research Center at Cleveland, Ohio; the Structures Laboratory at the NASA Langley Research Center at Langley AFB, Virginia; and the Applied Technology Laboratory at Fort Eustis, Virginia. These labs perform the majority of aeronautical research and development work.

The overall emphasis of the Army's aviation MMT program is to perfect technologies which have a good probability of implementation and high potential benefits. For the most part, efforts are directed towards projects which offer both cost reductions and product improvements. The results of these projects will be made available to other Government agencies and to Industry.

The most important criteria of aircraft materials are strength and low weight. A large part of the aviation MMT program is dedicated to establishing processes to replace metals with materials which have better strength to weight ratios. Composite materials suitable for aviation have been developed and are being used; however, techniques for the production and application of composites need further development to achieve increased use.

The use of composite materials in Army aircraft is anticipated to increase as a result of current work in R&D and MT leading to an all-composite helicopter fuselage. Raw material costs are expected to decrease with the increased use of composites in DOD and Industry. Also, as confidence in the use of composites increases, reservations held by the design and (quality control groups) will diminish, and composites will be incorporated in the earliest stages of weapon development.

Composite projects are planned for virtually every part of the helicopter. Many projects are planned for airframe applications. One project will establish automated methods to eliminate many hand layup and cutting operations required for the fabrication of the cabin section. Another will apply ultrasound techniques to the pultrusion of epoxy resin composites to improve the physical properties of the material and to speed up the processing. A project in the rotor area will establish a new method for assembling tail rotor blades which eliminate three separate cure/bond cycles. This will be accomplished by using an alternate blade core material which is compatible with a single cure cycle. In the drive area, one project will result in methods for manufacturing a filament wound composite gearbox housing.

There are many areas in aircraft in which metals can not be replaced. Projects have been submitted to improve production of these items. Since many aircraft metals used in the propulsion system are tough and expensive, machining to final shape is difficult and produces costly scrap. Improving powder metal technology will provide components much closer to final shape, greatly reducing the time and effort to produce the final product. Several projects are included to implement recent advances in gear manufacturing and should provide an improved item at a lower cost. An effort is planned to replace metal turbine blades with ceramic blades. This will provide better operating characteristics at lower cost.

US ARMY COMMUNICATIONS AND ELECTRONICS COMMAND
(CECOM)

The US Army Communications and Electronics Command (CECOM), headquartered at Fort Monmouth, NJ, is responsible for research, development and acquisition of communications, tactical data, and command and control systems for the Army. In addition to logistics, materiel management, engineering, maintenance engineering, and product assurance activities, the command organization includes three technical centers, seven project managers, and one program manager. The three technical centers include the Center for Tactical Computer Systems (CENTACS), the Center for Communications Systems (CENCOMS), and the Center for Systems Engineering and Integration (CENSEI). The seven Project Managers include those for the Position Location Reporting System/Tactical Information Distribution System (PLRS/TIDS); the Field Artillery Tactical Data Systems (FATDS); the Operations Tactical Data Systems (OPTADS); the Satellite Communications (SATCOMA); the Single Channel Ground & Airborne Radio System (SINCGARS); the Multi-Service Communications Systems (MSCS) and the Army Tactical Communications Systems (ATACS). The Program Manager identified above is for Test, Measurement, and Diagnostic Equipment (TMDE).

CECOM's planned projects cover a variety of electronics problems with special emphasis on computer applications and circuit technology. Projects support efficient manufacturing of custom components for use in future tactical radios.

Three projects proposed for FY 85-88 funding will develop advanced methods for production of detector materials and components needed for night vision devices. Currently, infrared detectors are produced on a small scale under laboratory conditions. Unit costs are high and repeatability is low. One near term project deals with scaling up the distillation of tellurium, a raw material for mercury-cadmium-telluride (HgCdTe) detectors. A critical measurement for determining the quality of HgCdTe wafers involves a time consuming manual procedure. For FY 88, a project that will apply automated scanning techniques for high resolution inspection of the wafer is planned. Another FY 88 project will use chemical vapor deposition techniques to apply HgCdTe onto gallium arsenide wafers.

Additional program funding largely anticipates micro-electronics as the driving force in componentry and built-in test capability for command, control, and communications systems. Computer-dominated methodologies are inherent in such areas as design, manufacture, and manufacturing documentation for communications systems and are expected to be of particular value for the short lead time, low volume production anticipated for future equipment and systems.

US ARMY DEPOT SYSTEM COMMAND

(DESCOM)

The US Army Depot System Command (DESCOM), with headquarters at Letterkenny Army Depot, Chambersburg, Pennsylvania, commands and controls the twelve depots and seven depot activities in the United States and West Germany which comprise the US Army Depot System. Activated in September 1976, this command employs over 37,500 civilians and nearly 1,400 military personnel and manages an annual budget in excess of \$1.5 billion.

DESCOM is a major interface with the soldier in the field. The depots store and ship a broad range of general supplies and munitions managed by the Army Defense Logistics Agency, and other agencies, to US and allied units worldwide. Half of DESCOM's personnel and three-quarters of its budget are dedicated to depot-level maintenance on most of the equipment in the Army's inventory. DESCOM is striving to improve the productivity of its work force through innovative management techniques and through the acquisition of modern capital equipment, such as industrial robots.

DESCOM's planned projects span repair and overhaul operations for tracked/wheeled vehicles, communications systems, and aircraft.

The vehicle and aircraft related projects include robotics applications which will reduce personnel exposure to hazardous cleaning and refinishing operations, and will improve repair procedures which are time consuming or labor intensive. Significant efforts are directed to the overhaul of track pads and road wheels. These include automated systems for the injection molding and curing processes for replacement pads and wheels. Engine overhaul operations will be improved by projects that will automate disassembly, inspection, machining, and reassembly.

In the communications/electronics area, DESCOM will conduct a project to refinish electronics shelters.

TITLE - PORTABILITY OF DATA AMONG ALL CAD/CAM RESOURCES

PROBLEM - THE ORGANIC MAINTENANCE FACILITIES IN DESCOM HAVE SEVEN CAD/CAM SYSTEMS FROM THREE DIFFERENT VENDORS. THESE SYSTEMS DO NOT HAVE THE CAPABILITY TO EXCHANGE PART GEOMETRY DATA BASE INFORMATION.

SOLUTION - IMPLEMENTATION PLAN FOR THE INITIAL GRAPHICS EXCHANGE SPECIFICATION WILL BE ESTABLISHED FOR DESCOM. SPECIFICATION REQUIREMENTS AND OPERATING PROCEDURES WILL BE DEVELOPED FOR IGES TRANSLATORS.

(E05) TITLE - ENHANCED PAINT REMOVAL PROCESS THRU CAVITATION

PROBLEM - CURRENT BLAST REMOVAL METHODS HAVE LIMITATIONS. THE EQUIPMENT IS BULKY AND INCOMPATIBLE WITH ROBOT MANIPULATORS. A RELIABLE FLOW OF ABRASIVE MEDIA IS SELDOM PROVIDED AND DENSE CONCENTRATIONS OF DUST ARE GENERATED.

SOLUTION - ESTABLISH A CAVITATION WATER JET PROCESS FOR REMOVING PAINT AND CURING. THE PHYSICAL SIZE OF THE CAVITATION GUN AND HOSE ARE MUCH SMALLER AND MORE COMPATIBLE WITH ROBOTIC UNITS.

(E06) TITLE - APPLICATION OF GROUP TECHNOLOGY TO ROTARY WING AIRCRAFT

PROBLEM - COMPONENTS FOR THE POWERTRAIN OF ROTARY WING AIRCRAFT ARE TYPICALLY MANUFACTURED IN SMALL LOT SIZES. THIS LEADS TO DUPLICATION OF PART DRAWINGS AND DESIGNS WHICH CAUSES INEFFICIENT PROCESSES AND INCREASED OVERHAUL COSTS.

SOLUTION - APPLY A CLASSIFICATION AND CODING/GROUP TECHNOLOGY SYSTEM TO MANUFACTURE PARTS IN FAMILIES.

COMPONENT -- PRINTED CIRCUIT BOARDS

(E07) TITLE - MULTILAYER PRINTED CIRCUIT BOARD REPAIR

PROBLEM - LACK OF PROVEN REPAIR METHODS FOR MULTILAYER CIRCUIT BOARDS RESULTS IN EXCESSIVE COSTS. REPLACEMENT BOARDS COSTING UP TO \$30K EACH MUST BE PURCHASED FROM THE OEM EVEN WHEN REPAIR OF THE BOARDS IS FEASIBLE.

SOLUTION - ESTABLISH & REPAIR CAPABILITY FOR MULTILAYER PRINTED CIRCUIT BOARDS. DEVELOP THE REPAIR METHODOLOGY AND NECESSARY TECHNOLOGY.

US ARMY ELECTRONICS RESEARCH AND DEVELOPMENT COMMAND
(ERADCOM)

The Army Electronics Research and Development Command in Adelphi, Maryland develops a broad range of electronics and electro-optical equipment. ERADCOM maintains programs in such areas as high performance optical systems which enable soldiers to see deep into the battlefield day or night, in any kind of weather, and through any type of obscurant. Some ERADCOM products can neutralize the enemy's electronic warfare efforts, while others make our weapons less vulnerable to enemy sensors. The command also specializes in electronic fuzes, radars and radar detection systems, electronic surveillance devices, meteorological equipment, thermal imaging devices and lasers.

Seven laboratories are integrated into ERADCOM's structure. These laboratories are product oriented and as a result can identify major problem areas where applied MMT efforts can provide important benefits. Although ERADCOM and its laboratories identify and manage projects, the bulk of the actual work is contracted out to industry.

In the category of integrated electronics, ERADCOM will pursue the establishment of various technologies for Very High Speed Integrated Circuits (VHSIC). These projects include a tape automated bonding process that is compatible with VHSIC chips; a process to improve the productivity for ceramic packages; improved processes for grid array and perimeter chip carriers; and, in-process screening and quality control methods.

Another major area of interest is the Common Module detector components which are used in night vision systems for the TOW and DRAGON missiles, night observation devices and thermal sights and viewers for tanks, helicopters and fighting vehicles. A project is underway to eliminate the hand fabrication of up to 1000 gold wire bond connections in each detector and to demonstrate the use of non-glass materials in the manufacture of the dewar structure. Another project is establishing techniques for growing a thin epitaxial film of mercury-cadmium-telluride (HgCdTe) onto CdZnTe wafers. A planned project will improve production methods in order to maintain critical dimensions in the miniature linear drive motor that powers the cyrogenic cooler. Other planned projects will address the high rate production of thermoelectrically-cooled (Peltier effect) detectors which operate at 3-5 micron wavelengths.

		PRIOR	64	65
		68	67	68

COMPONENT -- ARRAYS

(1507) TITLE - 3-5 MICRON TE COOLED FOCAL PLANE MODULES

PROBLEM - IMPROVED THERMAL IMAGING EQUIPMENT OPERATING AT 3-5 MICRONS REQUIRE USE OF HIGH DENSITY MATRIX DETECTOR ARRAY IN THE ORDER OF 2000 ELEMENTS. THIS EQUIPMENT CAN'T BE PRODUCED WITH TODAY'S THERMAL IMAGING TFT-FOCAL-PLANE ARRAY TECHNOLOGY.

SOLUTION - INITIATE A PHASED PROGRAM TO ESTABLISH CONTROLLED MANUFACTURING PROCESSES AND TEST METHODS TO PRODUCE INTEGRATED FOCAL PLANE ARRAY COOLERS/DEWAR MODULES TO OPERATE AT 195 K. ESTABLISH AND VALIDATE PRODUCTION AND TEST METHODS FOR COMPLETED MODULE.

(1511) TITLE - LIQUID PHASE EPITAXIAL HGCTE

PROBLEM - LOW YIELD IN CURRENT METHOD OF MANUFACTURE OF COMMON MODULE DETECTOR ARRAYS. GROWTH OF HGCTE CRYSTALS REQUIRES MANUAL LAPPING, POLISHING + THINNING TO ACHIEVE PERFORMANCE SPECIFICATIONS.

SOLUTION - USE LIQUID PHASE EPITAXIAL GROWTH OF THIN-FILM ON COTE SUBSTRATE ELIMINATING MANUAL STEPS.

COMPONENT -- INFRARED/UV

(1505) TITLE - THERMOELECTRIC COOLER MATERIALS

PROBLEM - SUPERIUM HIGH PERF. MATERIALS REQUIRED FOR 2 GEN. FLIR TE COOLERS ARE AVAILABLE ONLY IN RESEARCH QUANTITIES + QUALITIES. RESEARCH FROM RESEARCH TO PRODUCTION WILL INTRODUCE VARIOUS DEGRADATION FACTORS.

SOLUTION - ESTABLISH PRE-PRODUCTION METHODS + TECHNIQUES FOR HIGH QUALITY CONTROL NECESSARY TO MEET 2 GEN. FLIR DEMANDS.

(1509) TITLE - LINEAR RESONANCE COOLERS - PHASE I

PROBLEM - SECOND GENERATION FLIR'S WILL EMPLOY MAGNETIC SUSPENSIONS IN THE CRYOGENIC COOLERS. MAINTAINING CRITICAL SUSPENSION TOLERANCES IN PRODUCTION WILL REQUIRE DEVELOPING EXTENSIVE QUALITY CONTROL PROCEDURES.

SOLUTION - DEVELOP MANUFACTURING METHODS FOR MAINTAINING CRITICAL TOLERANCES.

(1510) TITLE - MMAT FOR METAL DEWAR AND UNSOLDERED LEADS

PROBLEM - THE GOLD WIRE BUNDLES CONNECTIONS ARE MADE BY HAND WHICH IS A TIMEOUS AND EXPENSIVE PROCESS. THE GLASS STEM IS HAND FASHIONED AND IS PRONE TO DAMAGE.

SOLUTION - FABRICATING THE STEM WITH THIN METAL WALLS USING PAINTED CIRCUIT FEED THRUCCS WILL REDUCE THE DEFECTS IN PRODUCTION AND DECREASE COST.

COMPONENT -- LASER

(5066) TITLE - 1 TO 3 MICRON AVALANCHE DETECTORS

PROBLEM - MANUF. COSTS, VOLUME PROD. TECHNIQUES AND RELIABILITY HAVE TO BE ADDRESSED.

SOLUTION - ESTABLISH MANUFACTURING CAPABILITY FOR VOLUME PRODUCTION OF RELIABLE, LOW COST 1-3 MICRON AVALANCHE DETECTORS.

COMPONENT -- CATHODE
CATE G U R Y
ELECTRON TUBES

COMPONENT -- LATHE

(5111) TITLE - VAPOR ORGANIC METALLIC EPITAXIAL GROWTH PROCESS

PROBLEM - LIQUID EPITAXIAL GROWTH PROCESS REQUIRES- A LARGE AND COSTLY HIGH TEMP REACTOR, BULKY QUANTITIES OF SATURATION MELT MATERIALS, C) COSTLY QUALITY GALLIUM ARSENIDE SUBSTRATES, DILIGENTLY OPERATION PROCESS PER SINGLE GROWTH.

SOLUTION - THE VAPOR-LIGAND-METALLIC PROCESS WILL ENABLE MINIMUM FACILITATION REQUIREMENTS, USE OF CONTROLLED GASES REQUIRING NO MELT MATERIALS, POSSIBLE USE OF LESS EXPENSIVE SUBSTRATES, AND MULTICRONT PRODUCTION ORIENTED PROCESS.

COMPONENT -- MISCELLANEOUS
CATE G U R Y
CHIP

COMPONENT -- INDUSTRIAL PRODUCTIVITY IMPROVEMENT (ELECTRONICS)

(\$74

PROBLEM - MANY ELECTRONICS ITEMS PRODUCED FOR ARMY ARE BUILT IN FACTORIES NOT USING MODERN METHODS AND EQUIPMENT, AUTOMATIC MATERIALS HANDLING SYSTEMS, OR COMPUTERIZED MANAGEMENT INFORMATION SYSTEMS. THESE PLANTS MUST BE UPDATED TO IMPROVE PRODUCTIVITY.

SOLUTION - ANALYZE A CONTRACTORS FACILITY, EVALUATING BOTH MANUFACTURING TECHNIQUES AND MANAGEMENT SYSTEMS. INCLUDE MATERIALS HANDLING, LAYOUT, INVENTORY CONTROL, CAM, PRODUCTION EQUIPMENT, AND MIS. IDENTIFY NEW METHODS EQUIPMENT. DEVELOP A CAPITAL ACQ. PRG.

• C A T E G O R Y
• PLINTHIALIZED ELECTRUMILS

WHT FIVE YEAR PLAN
RCS DRAFT 126

CLAPMENT -- CIRCUITRY

(5168) TITLE - AUTOMATIC RETICLE INSPECTION SYSTEM, PHASE I

PROBLEM - THERE IS NO WAY TO CHECK TAPE-GENERATED RETICLE PATTERNS AGAINST THE COMPUTER-GENERATED MASTER TAPE. VISUAL INSPECTION OF RETICLES FOR PIHMLES OR DUST PARTICLES IS VERY DIFFICULT.

SOLUTION - USE PATTERN RECOGNITION EQUIPMENT TO COMPARE THE RETICLE PATTERN WITH THE ORIGINAL COMPUTER OUTPUT. MAKE A RECORD OF DEFECTS THAT WILL PERMIT REPAIR OF THE RETICLE.

(5248) TITLE - ADVANCED DAFFER IMAGING SYSTEM (AVSIS)

PROBLEM - VHVIC REQUIREMENTS FOR RESOLUTION AND INTER-LEVEL ALIGNMENT ACCURACY CANNOT BE MET WITH CURRENT WAFER PATTERNING SYSTEMS. RESOLUTION OF 1.0 MICRUMETERS AND OVERLAY ALIGNMENT OF 0.1 MICRUMETER ARE NEEDED.

SOLUTION - DEVELOP A LASER IMAGING SYSTEM INCLUDING ULTRASONIC HEIGHT MEASUREMENT, U料RAVILET OPTICS SYSTEM AND AN AUTOMATIC RETICLE INSERTION AND REGISTRATION SYSTEM WITH TEMPERATURE AND HUMIDITY CONTROLS TO ATTAIN 0.1 MICRUMETER ALIGNMENT ACCURACY.

(5272) TITLE - TAPE AUTMATED BUNDING (TAB)

PROBLEM - PRESENT TAB PROCESSES ARE NOT COMPATIBLE WITH VHVIC CHIP I/O COUNTS, SMALL PAD SIZES AND COMPLEXITY.

SOLUTION - ESTABLISH TECHNIQUES FOR PRODUCING TAPE COMPATIBLE WITH VHVIC CHIPS. TAPE WILL PROVIDE OVER 200 I/O WITH PAD SIZES ON THE ORDER OF 2 MILS.

(5273) TITLE - FIRST LEVEL PACKAGING AND INTERCONNECTIONS (VHVIC)

PROBLEM - NEITHER THE GRID ARRAY CHIP CARRIER NOR THE PERIMETRIC CHIP CARRIER IS CURRENTLY VHVIC COMPATIBLE. THERE IS NO ADVANCED TECHNIQUES FOR THEIR MANUFACTURE.

SOLUTION - IMPROVED PROCESSES FOR BOTH TYPES OF PACKAGES WILL BE DEVELOPED.

(5274) TITLE - MULTICHP PACKAGES (VHVIC)

PROBLEM - MANUFACTURING FACILITIES ARE EXTREMELY LIMITED FOR THE PRODUCTION OF VHVIC COMPATIBLE MULTICHP CERAMIC PACKAGES.

SOLUTION - TUG UP A PILOT PRODUCTION LINE FOR A SELECTED NUMBER OF TYPES OF PACKAGES. ADVANCED CUFIRE AND THICK FILM TECHNOLOGY WILL BE IMPLEMENTED.

IMPLEMENT -- CIRCUITRY

(euc9) TITLE - 94 GHz MILLIMETER WAVE MONOLITHIC RECEIVER SYSTEM

PROBLEM - MILLIMETER WAVE RECEIVERS ARE HAND ASSEMBLED OF SEMICONDUCTOR CHIPS IN STRIPLINE SUBSTRATES. MUCH HAND LABOR IS NEEDED IN ASSEMBLY, INTERCONNECTION AND TESTING.

SOLUTION - GROW Ga-As LAYERS EPITAXIALLY ON GALLIUM ARSENIDE WAFERS AND DIFFUSE CIRCUIT ELEMENTS IN-SITU THRU SILICON DIOXIDE MASKING. FORM GUNN DIODES, CONDUCTING LINES AND CAPACITORS TO FORM A LOCAL OSCILLATOR. ADD MIXER CHIP + FET AMPLIFIER CHIP.

IMPLEMENT -- CIRCUITRY
SOLUTION - GROW Ga-As LAYERS EPITAXIALLY ON GALLIUM ARSENIDE WAFERS AND DIFFUSE CIRCUIT ELEMENTS IN-SITU THRU SILICON DIOXIDE MASKING. FORM GUNN DIODES, CONDUCTING LINES AND CAPACITORS TO FORM A LOCAL OSCILLATOR. ADD MIXER CHIP + FET AMPLIFIER CHIP.

IMPLEMENT -- BATTERIES

(e164) TITLE - EXJAH BATTERY MANUFACTURING TECHNOLOGY, PHASE 1

PROBLEM - PRESENT K AND U MODELS OF UNATTENDED EXPENDABLE JAMMER RESERVE POWER SUPPLY (UEJPS) ARE HAND MADE 1 OR 2 AT A TIME. UNLESS FABRICATION/ASSEMBLY ARE PRODUCTION ENGINEERED, LABOR COSTS WILL MAKE THE BATTERY PROBABILITIVELY EXPENSIVE.

SOLUTION - EVALUATE THE VARIOUS STEPS IN FABRICATION/ASSEMBLY FOR UEJPS HUM BEST TO MAKE IN HIGH VOLUME. DESIGN, BUILD AND VALIDATE PROTOTYPE TOOLING AND MACHINERY FOR CONVERTING TO HIGH VOLUME PRODUCTION.

(e005) TITLE - LOW COST RECHARGEABLE LITHIUM-T152 BATTERIES

PROBLEM - RECHARGEABLE LITHIUM BATTERIES REQUIRE HIGH PURITY MATERIALS AND PROCESSING IN A MOISTURE-FREE ENVIRONMENT. ELECTRODE FABRICATION IS PRESENTLY CONDUCTED ON AN INDIVIDUAL ELECTRODE BASIS USING MOLD PRESSING TECHNIQUES.

SOLUTION - ESTABLISH A LOW COST MANUFACTURING PROCESS FOR THE PREPARATION OF THE CATHODE AND ELECTROLYTE SOLVENT AND SOLUTE. IN ADDITION, CONTINUOUS MACHINERY AND TECHNIQUES WILL BE ESTABLISHED FOR HIGH RATE, LOW COST ELECTRODE FABRICATION.

(euc0) TITLE - IMPROVED, HIGH CAPACITY BATTERIES, BA-5598/U + AA-5590/U

PROBLEM - THE PRESENT BA-5598/U AND AA-5590/U BATTERIES USE THE LITHIUM-SULFUR DILXIDE CELL SYSTEM AND HAVE CAUSED PROBLEMS WITH VENTING. ACCIDENTS HAVE CAUSED USER RESERVATIONS. ALSO PROJECTED POWER NEEDS REQUIRE VERY HIGH ENERGY DENSITY LITHIUM CELLS.

SOLUTION - CONVERT THESE BATTERIES TO THE MORE ADVANCED AND INHERENTLY SAFER LITHIUM-THIOLYL-CHLORIDE SYSTEM. IT IS PROPOSED TO STUDY THIS SYSTEM FIRST AS A MAJOR PROJECT AND THEN AS AN AFT. UNDER HIGH CURRENT DRAIN CONDITIONS, DOUBLE SERVICE LIFE EXPECTED.

IMPLEMENT -- CIRCUITRY

US ARMY MATERIALS AND MECHANICS RESEARCH CENTER
(AMMRC)

The Army Materials and Mechanics Research Center (AMMRC) is designated the AMC lead laboratory for Materials Testing Technology. In this role, AMMRC is responsible for management and direction of the AMC materials testing technology activities and formulation of the Materials Testing Technology (MTT) Program. This program formulation is accomplished by identifying and defining materials testing problem areas in response to system requirements of the AMC major subordinate commands project managers. The lead laboratory mission also encompasses the advising and assisting of the major subordinate commands and project managers in the utilization of MTT in order to assure a smooth transition from the developmental to the production phases of the life cycle. Specific areas of effort are as follows:

a. Automated Testing

One of the primary needs in NDT and in inspection in general is to remove the decision-making from the inspector where possible. Efforts will be intensively directed toward providing engineering prototype systems utilizing automated decision-making. These include automated radiographic and ultrasonic techniques, optical/laser techniques, and computerized chemical analysis. The ultimate goal in all automated testing systems is the essential feedback to the total system for automated process control.

b. Predictive Failure

The need for diagnostic measurement techniques for anticipation of catastrophic failure and for the measurement of remaining life, both in operating equipment and in units being overhauled and rebuilt, presents a tremendous opportunity for cost savings and reliability improvement. A principal thrust has come from the loss of diagnostics and in-situ measurements adjunct to non-destructive testing represents the real time use of NDT techniques with analysis and decision elements built in.

c. Materials

As the newer materials are utilized in major weapon systems, improved inspection techniques must be made available to assure adequate and reliable performance. Of particular interest in the next five years are composites, elastomers, plastics, and ceramics, with continuing interest in metals and energetics (explosives, pyrotechnics, and propellants).

d. Techniques

Specifically covered in the objectives of the MTT Program is the investigation of specific physical principles which can potentially offer significant improvement in sensitivity, cost, portability, or speed, and combination of these. The development and application of techniques, such as ultrasonics, infrared, holography, spectroscopy, chromatography, etc, can significantly improve AMC materiel and offer substantial improvement in process control.

The MTT Program includes the testing of electronic materials and devices under one of four broad test method categories: nondestructive, chemical, mechanical, or electronics. The recently established "electronics" category emphasizes the importance of quality assurance inspection procedures for devices which are often used in mission critical applications.

US ARMY MISSILE COMMAND
(MICOM)

The US Army Missile Command is located at Redstone Arsenal, AL, and is responsible for research, development, and acquisition of missile systems for the Army. Facilities include flight test ranges, laboratories, and a simulation center.

Major systems managed by special project offices include STINGER (Shoulder-Fired Air Defense Guided Missile), MLRS (Multiple Launched Rocket System), HELLFIRE (Helicopter-Carried Air-To-Ground Missile), PERSHING (Extended Range Ground-To-Ground Missile) and the 2.75 Inch Air-To-Ground Rocket. MICOM is also the Army's center for laser research and manages efforts to apply lasers in missile guidance and as weapons.

MICOM supports technological thrusts in the following electronics areas: (1) Manufacturing techniques for multiple chips employing multiple technologies that are projected to be in the mainstream of the semiconductor marketplace for many years to come. (2) Electronic computer-aided manufacturing and hybrid computer-aided design and manufacturing in order to automate microelectronic production lines and therefore improve productivity, increase fabrication speed and decrease unit cost.

The missile guidance system is a major area of effort for MICOM's MMT Program. Several projects are being applied to integrated circuits and seekers. They cover laser soldering of surface mounted devices, semiadditive fine-line electroless copper plating, an automatic hermetic sealing system for hybrid circuit assemblies, methods for producing millimeter wave receivers, growth of detector grade cadmium sulfide crystals and volume methods for 128 x 128 staring focal plane arrays. Several other guidance system projects are being planned. These deal with the fabrication of optical systems and radomes.

Propulsion system components such as motor cases, nozzles, and propellants are the subjects of several manufacturing technologies efforts. Work is underway on production processes for fabricating composite motor cases with integral pole pieces and attachments. Other projects cover a winding/cocuring process for large motor case insulators and the replacement of asbestos in insulator formulations.

Proposals in the area of test equipment include work on electrical components where efforts cover screening of chips and validation for semiconductor devices.

US ARMY TANK-AUTOMOTIVE COMMAND

(TACOM)

The US Army Tank and Automotive Command is located in Warren, MI, and has the mission of developing, acquiring, and fielding tracked and wheeled military combat, tactical, and general purpose vehicles. The mission is worldwide in scope and includes among its customers all of the US military services, and friendly foreign nations. The production base for mission items is made up of both private and government-owned contractor-operated facilities. MMT efforts are accomplished partially in-house and partially out-of-house.

The main requirements for the production of armored structures are to increase their tolerance to ballistic threats while reducing overall weight. Effective firepower is essential; but, the survivability of modern combat vehicles also depends upon protection and agility. Two predominant types of armor are used in the latest combat vehicles. In tanks, hulls and turrets are complex, laminated structures consisting of steel plates and fiberglass panels. In other combat vehicles, these items are more conventional weldments which consist of thick aluminum plates. Armor fabrication requires a great deal of manual labor for plate cutting, joint preparation, multi-pass welding, weld repair and stress relief. In response to these problems, TACOM will use MT projects to establish: automated records handling systems for welding procedures and process planning documents; weld monitoring systems to detect defect producing conditions; a plasma-arc plate cutting facility with numerical controls; high deposition welding techniques for steel and aluminum; and, advanced NDT inspection systems. To take full advantage of new developments in combination type and ceramic type armors, it will also be necessary to develop practices for economical production. TACOM will sponsor projects covering deformation cycles, fabrication procedures and attachment methods for these materials.

Another major requirement is to develop production techniques for drive systems for the M1 Tank and other vehicles. The AGT 1500 gas turbine will be the subject for several efforts that will bring down production costs. Two projects cover scaled-up techniques for applying erosion and thermal coatings to internal components. Another project will provide a computer controlled balancing system for the impeller/rotor. This system will, in real time, remove precise amounts of material with a laser. The Army is developing an efficient diesel engine for tactical vehicles. This "adiabatic" engine does not have a cooling system and operates at temperatures which would char engine oils including those with synthetic bases. As a result, lubricating fluids are not used. Engine components which are subjected to thermal shock, high dynamic loads and friction are made from advanced ceramic materials. MT work is being directed to producing consistently high quality silicon nitride and silicon carbide components.

In the area of track and suspension, the goals are to introduce production techniques for more advanced systems that meet demands for higher performance over brutally adverse terrain. It is a challenge to keep production costs down and to build in high reliability. Lightweight casting and surface hardening investigations are being fostered by these requirements.

COMPONENT -- GENERAL

(4011) TITLE - PULSED HIGH CURRENT RESISTANCE WELDING OF ARMOR PLATE

PROBLEM - PRESENT METHODS OF WELDING ARMOR ARE TIME CONSUMING + REQUIRE MULTIPLE WELDING POST WELD TREATMENT + WELD REPAIR.

SOLUTION - TO APPLY PULSED HIGH CURRENT RESISTANCE WELDING TECHNOLOGY TO THE WELDING OF ARMOR PLATE.

(4031) TITLE - CAD GENERATION AND STORAGE OF WELDING PROCEDURES

PROBLEM - THE TOTALLY WELDED STRUCTURE OF M1 TANK REQUIRES EXTENSIVE DOCUMENTATION OF RECORDED JOINT WELDING PROCEDURES. THE PREPARATION OF A NEW PROCEDURE TO KEEP CURRENT WITH DESIGN AND METHOD CHANGES IS INCONVENIENT AND EXPENSIVE.

SOLUTION - DEVISE A PROCEDURE GENERATION AND STORAGE SYSTEM USING EXISTING CAD/CAM EQUIPMENT. STRUCTURAL DESIGN ISOMETRICS CONTAINED IN THE SYSTEM CAN BE USED TO DEVELOP ISOMETRIC DRAWINGS AND JOINT CROSS SECTIONS.

(4577) TITLE - ATTACHMENT OF COMBINATION ARMOR TO COMBAT VEHICLES

PROBLEM - COMBINATION ARMOR SYSTEMS PROVIDE LARGE BALLISTIC IMPROVEMENT BUT REQUIRE COMPLEX ATTACHMENT METHODS.

SOLUTION - IDENTIFY COST EFFECTIVE METHODS FOR PRODUCTION APPLICATION.

(c038) TITLE - HIGH DEPOSITION WELDING PROCESSES FOR ARMOR

PROBLEM - WELDING IS LABOR INTENSIVE AND HIGH COST IT IS A MAJOR COST DRIVER IN ARMOR VEHICLE MANUFACTURE.

SOLUTION - HIGH DEPOSITION WELDING PROCESSES WILL PERMIT WELDING TO BE ACCOMPLISHED MORE RAPIDLY THUS REDUCING MANPOWER REQUIREMENTS AND INCREASING PRODUCTIVITY.

(c057) TITLE - M-1 COMBAT VEHICLE-MFG TECHNOLOGY

PROBLEM - MATERIALS AND MANUFACTURING PROCESSES EMPLOYED IN THE MFG OF THE M1 CAN BE IMPROVED BY INCORPORATING NEW TECHNOLOGIES TO THE CURRENT SYSTEM. THIS WILL ENABLE THE M1 TO BE PRODUCED MORE ECONOMICALLY.

SOLUTION - IMPROVE PROCESSES FOR M1 MFG. THESE INCLUDE THERMAL CUTTING, AUTOMATED METALLIZING, THERMALLY ASSISTED MACHINING, ETC.

(c025) TITLE - WELD PROCESS PLANNING AND CONTROL

PROBLEM - PLANNING, MONITORING, AND INSPECTION OF THE WELDING PROCESS ARE EXPENSIVE, TIME CONSUMING, AND CAUSE PRODUCTION DELAYS WHEN A QUALITY PROBLEM IS SUSPECTED.

SOLUTION - USE THE COMPUTER FOR PROCESS PLANNING AND THE REDESIGN OF WELDED JOINTS, USE MONITORING SYSTEMS TO DETECT WELD CONDITIONS, AND AUTOMATE VISUAL INSPECTION OF WELDMENTS.

							1250

PROBLEM - THERE ARE NO COMMERCIAL SOURCES FOR NEWLY DEVELOPED CERAMIC ARMOR MATERIALS IN THE QUALITY, SIZES AND SHAPES NOR THE METHODS REQUIRED TO COMPLETE THE INSERTION OF THE ARMOR INTO THE END ITEM.

SOLUTION - ESTABLISH MANUFACTURING PROCESSES.

COMPONENT -- HULL/BODY

14041) TITLE - ADVANCED NOT INSPECTION TECHNOLOGY

PROBLEM - ADVANCED NOT METHODS SUCH AS ULTRASUNICS AND HOLOGRAPHY HAVE SHOWN PROMISE AS BEING MORE EFFECTIVE AND SAFE THAN EXISTING METHODS SUCH AS X-RAY.

SOLUTION - INVESTIGATE AND ESTABLISH ADVANCED NOT WELD INSPECTION SYSTEMS FOR INSPECTION OF ALUMINUM WELDS.

15091) TITLE - HEAVY ALUMINUM PLATE FABRICATION

PROBLEM - MANY COMBAT AND TACTICAL VEHICLE HULLS AND THEIR COMPONENTS ARE FABRICATED FROM HEAVY ALUMINUM PLATE. CUTTING THIS HEAVY ALUMINUM PLATE TO SPECIFIED CONTOURS AND WELDING THE PIECES TOGETHER REQUIRES A GREAT DEAL OF MANUAL LABOR.

SOLUTION - ESTABLISH THE CAPABILITY TO CUT HEAVY ALUMINUM PLATE RAPIDLY USING PLASMA ARC WITH NUMERICAL CONTROLS. PROCESS PARAMETERS WILL BE ESTABLISHED FOR HIGH DEPOSITION WELDING PROCESSES.

16065) TITLE - IMPROVED CASTING PROCESSES

PROBLEM - THE CASTING PROCESS IS WASTEFUL.

SOLUTION - IMPROVE CAST ARMOR QUALITY THROUGH ADVANCED SULIDIFICATION TECHNIQUES, SPECIAL DEOXIDATION PRACTICES, AND UNIQUE MOLDING PROCESSES.

16099) TITLE - MANUFACTURING METHODS FOR SPECIALIZED ARMOR MATERIALS

PROBLEM - INDUSTRY PRODUCTION PRACTICES FOR PROVIDING COMPLEX COMPONENTS COMPOSED OF NOVEL PROTECTIVE ARMOR MATERIALS IS UNAVAILABLE OR SUFFERS FROM MARKED DEFICIENCIES.

SOLUTION - SPECIAL ADAPTATIONS OF COMMERCIAL PRACTICES WILL BE USED TO ACCOMPLISH THE DEFORMATION CYCLES AND FABRICATION PROCEDURES REQUIRED TO PRODUCE THESE ADVANCED MATERIALS IN THE DIMENSIONS AND SHAPES NEEDED.

(4021) TITLE - AUTOMATED PAINT SYSTEM M1 TANK

PROBLEM - SPAR PAINTING THE INTERIOR COMPARTMENTS OF THE M1 TANK IS HAZARDOUS. PROTECTIVE GEAR REQUIRED FOR THE PAINTERS HINDERS THEIR ABILITY TO ADEQUATELY PAINT THE INTERIOR.

SOLUTION - REVIEW AVAILABLE EQUIPMENT AND DETERMINE SURFACE COATING METHODOLOGY. PREPARE SPECIFICATIONS FOR EQUIPMENT AND FIXTURES.

COMPONENT -- LIGHTWEIGHT/COMPOSITE STRUCTURES

(4001) TITLE - MANUFACTURING FOR CORROSION PREVENTION IN TACTICAL VEHICLES

PROBLEM - CURRENTLY THE ARMY HAS SEVERE CORROSION PROBLEMS WITH ITS TACTICAL TRUCK FLEET. ACHIEVING CORROSION RESISTANCE THROUGH THE APPLICATION OF KUSTPROOFING COMPOUNDS CONTRADICTS THE NBC REQUIREMENT FOR VEHICLES WITH CHEMICAL AGENT RESISTANT COATINGS.

SOLUTION - REINFORCED COMPOSITE MATERIALS CAN REDUCE CORROSION AND WEIGHT AND SIMPLIFY MFG. TECHNOLOGY REQUIREMENTS AND PRODUCTION PARAMETERS FOR VARIOUS COMPONENTS. FROM SMALL PARTS TO COMPLETE TRUCK CAB'S, WILL BE DETERMINED.

(6000) TITLE - LIGHTWEIGHT TILT-UP HOOD/FENDER ASSEMBLY

PROBLEM - CURRENT HOOD/FENDER ASSEMBLY MADE FROM STEEL STAMPINGS ARE TOO HEAVY FOR ONE MAN TO LIFT.

SOLUTION - REDUCE WEIGHT BY MANUFACTURING ITEMS FROM LIGHTWEIGHT FORMABLE PLASTIC.

(CONTINUED)

16053) TITLE - MANUFACTURE OF ENGINE COMPONENTS OF CERAMIC

PROBLEM - FABRICATION OF HIGH EFFICIENCY, HIGH TEMPERATURE DIESEL ENGINES REQUIRES ADVANCED MATERIALS. ENGINES FABRICATED WITH CERAMIC COMPONENTS HAVE BEEN DEMONSTRATED IN R&D BUT MANUFACTURING METHODS FOR SERIAL PRODUCTION COMPONENTS ARE LACKING.

SOLUTION - RECENT RESEARCH EFFORTS INDICATE THAT ENGINE COMPONENTS FROM HIGH STRENGTH STRUCTURAL CERAMICS (SILICON NITRIDE, SILICON CARBIDE) ARE FEASIBLE. THIS EFFORT WILL ESTABLISH QUANTITY PRODUCTION OF CERAMIC COMPONENTS OF CONSISTENT QUALITY.

16079) TITLE - ACT-1500 ENGINE

PROBLEM - THE NEED TO REDUCE COST AND IMPROVE PERFORMANCE OF THE ACT-1500 TURBINE ENGINE REQUIRES NEWER AND MORE INNOVATIVE MANUFACTURING TECHNOLOGY.

SOLUTION - INCORPORATE NEW PROCESSES AND TECHNOLOGY INTO THE ACT-1500 MANUFACTURING METHODS.

16123) TITLE - CERAMIC TURBOCHARGER ROTOR

PROBLEM - SMALL SILICON CARBIDE TURBOCHARGER ROTORS HAVE BEEN FABRICATED WITH A PROPRIETARY PROCESS IN INDUSTRY AND WERE SUCCESSFUL; HOWEVER, THE PROCESS CAN NOT BE APPLIED DIRECTLY TO ARMY COMPONENTS BECAUSE OF THE PROPRIETARY LIMITATION AND SCALE PROBLEMS.

SOLUTION - DEVELOP A PROCESS AND SCALE IT TO ACCOMMODATE THE LARGER SIZED ARMY ROTORS.

COMPONENT -- TRANSMISSION

16112) TITLE - LASER VIBRATION DEPOT INSPECTION SYSTEM

PROBLEM - TRANSMISSION AND TRANSFER ASSEMBLIES ARE TORN DOWN TO THE INDIVIDUAL PARTS FOR INSPECTION TO DETERMINE OVERHAUL REQ.

SOLUTION - ADAPT A LASER VIBRATION SENSOR (LVS) DEVICE FOR NOISE IDENTIFICATION AND MEASUREMENT INSPECTION, BY MAKING THE DEVICE INSENSITIVE TO EXTRANEous NOISE SOURCES AND ELECTROMAGNETIC INTERFERENCE.

16094) TITLE - AUSKILLED GEARS FOR TACTICAL VEHICLES

PROBLEM - THE PRESENT PROCESS FOR MAKING HIGH PERFORMANCE GEARS IS EXPENSIVE. THE FINAL GRIND IS ESPECIALLY EXPENSIVE AND INTRODUCES SURFACE CONDITIONS WHICH CAN SHORTEN GEAR LIFE.

SOLUTION - ESTABLISH PARAMETERS TO ENABLE USE OF THE AUSKULLING PROCESS FOR FINAL FINISH. THIS WILL ELIMINATE THE NEED FOR FINAL GRINDING.

COMPONENT -- MISCELLANEOUS

(4024) TITLE - CUTTING FLUID SELECTION/CONTROL SYSTEM

PROBLEM - MANY TYPES OF CUTTING FLUIDS ARE USED AND ARE SELECTED BY LOWEST COST OR BEST SALES PITCH WITH LITTLE REGARD FOR REQUIREMENTS OR EFFICIENCY.

SOLUTION - ESTABLISH CUTTING FLUID SELECTION AND CONTROL SYSTEM FOR ALL MACHINING OPERATIONS. A MACHINING SEVERITY INDEX WILL BE DEVELOPED FOR REPRESENTATIVE OPERATIONS, AS WELL A GENERIC CUTTING FLUID AND A RECYCLING SYSTEM.

(4025) TITLE - HIGH SPEED MACHINING FOR TANK COMPONENTS

PROBLEM - THE CURRENT MACHINING OPERATIONS AT GENERAL DYNAMICS MANUFACTURING FACILITIES ARE NOT REACHING OPTIMUM PERFORMANCE DUE TO FAILURE IN TAKING ADVANTAGE OF NEW TOOLS CURRENTLY ON THE MARKET.

SOLUTION - THIS PROJECT WILL SURVEY NEW TOOLING CURRENTLY ON THE MARKET SUCH AS CERAMICS, BORAZON AND DIAMOND CUTTING TOOLS WITH SPECIAL COATINGS AND GEOMETRY. IT WILL APPLY DATA GENERATED UNDER MAT PROJ 5090 AND SPECIFICALLY TAILOR THE NEW TOOLING TO GD NEEDS.

(4032) TITLE - ROBOTIC ASSEMBLY TECHNOLOGY

PROBLEM - ASSEMBLY OF TRACKED VEHICLES IS LABOR INTENSIVE AND ROBOTICS ASSEMBLY APPLICATIONS NEED TO BE DEVELOPED TO UNDERSTAND THE LIMITS FOR USE IN FUTURE VEHICLE DESIGN OR IMMEDIATE USE IN REPETITIVE ASSEMBLY APPLICATIONS.

SOLUTION - DEVELOP A ROBOTIC ASSEMBLY APPLICATION THAT WILL PROVIDE ECONOMIC BENEFITS AND A BASE OF KNOWLEDGE FOR FUTURE APPLICATIONS.

(4035) TITLE - LASER PROCESSING OF STEEL COMPONENTS

PROBLEM - CONVENTIONAL AND INDUCTION HEAT TREATMENT OF STEEL COMPONENTS SUCH AS THE DRIVE SPROCKET, TURRET RACE KING AND MAIN RING GEAR CAN RESULT IN PART DISTORTION AND DIMINISHED PHYSICAL PROPERTIES.

SOLUTION - PROVIDE A PRECISION INSTRUMENT TO PERFORM HARDENING OPERATIONS. A LASER IN LIEU OF PRESENT HEAT TREAT METHODS WILL REDUCE DISTORTION AND IMPROVE THE QUALITY OF HEAT TREATED COMPONENTS.

(4041) TITLE - AUTOMATED ASSEMBLY GRAPHICS

PROBLEM - ASSEMBLY WORKERS FOR THE MAT TANK HAVE LONG WORK CYCLES. THE WORKERS HAVE DIFFICULTY REMEMBERING ASSEMBLY SEQUENCES AND CRITICAL ASSEMBLY REQUIREMENTS. WORKERS CANNOT EASILY REPORT ASSEMBLY PROBLEMS. TRAINING OF NEW WORKERS IS DIFFICULT.

SOLUTION - COMPUTER SOFTWARE SYSTEMS WILL BE ACQUIRED TO DISPLAY OPERATION DESCRIPTIONS AND ROUTINE RECORDS. FEEDBACK SYSTEM WILL BE ESTABLISHED FOR QUALITY CONTROL REPLICATING PROCESS CONTROL AND PROCESS PLANNING SOFTWARE WILL INCORPORATE A PICTORIAL.

KCS DRAFT 126

COMPONENT -- PINS	TITLE - RULLER STRAIGHTENING OF TRACK PINS	FUNDING (\$000)					
		64	65	66	67	68	
		425					

PROBLEM - TRACK PINS ARE STRAIGHTENED AFTER CURE HARDENING BY BENDING BETWEEN KULLER SUPPORTS ON A HYDRAULIC PRESS.

SOLUTION - REPLACE PRESS STRAIGHTENING WITH AUTOMATIC RULLER STRAIGHTENING.

COMPONENT -- SHOES

(4514) TITLE - HARD FACING OF TRACK SHOES

PROBLEM - NO DEFINITE PROCEDURE AND HARD FACING MATERIALS HAVE BEEN ESTABLISHED AS THE MOST SATISFACTORY REPAIR COMBINATION FOR TRACK SHOES. PRIOR EFFORTS HAVE BEEN MADE IN BOTH THE USA AND EUROPE BUT NOTHING DEFINITE HAS RESULTED.

SOLUTION - THE TRACK SHOE GROUSERS WILL BE BUILT UP BY DEPOSITION USING A HARD FACING PROCESS. THE PROCESS WILL BE AUTOMATED AND TOOLING WILL BE DESIGNED TO ALLOW THE EQUIPMENT TO FOLLOW THE CONTOURS OF THE TRACK SHOE GROUSERS.

(4017) TITLE - IMPROVED MBT TRACK

PROBLEM - INCREASED VEHICLE PERFORMANCE REQUIREMENTS NECESSITATE HIGHER PERFORMANCE TRACKS THAN THOSE AVAILABLE TODAY. TO IMPLEMENT NEW METAL COMPOSITE, HIGHER STRENGTH FERRIUS ALLOYS, AND TITANIUM NEW MANUFACTURING PROCESSES MUST BE ESTABLISHED.

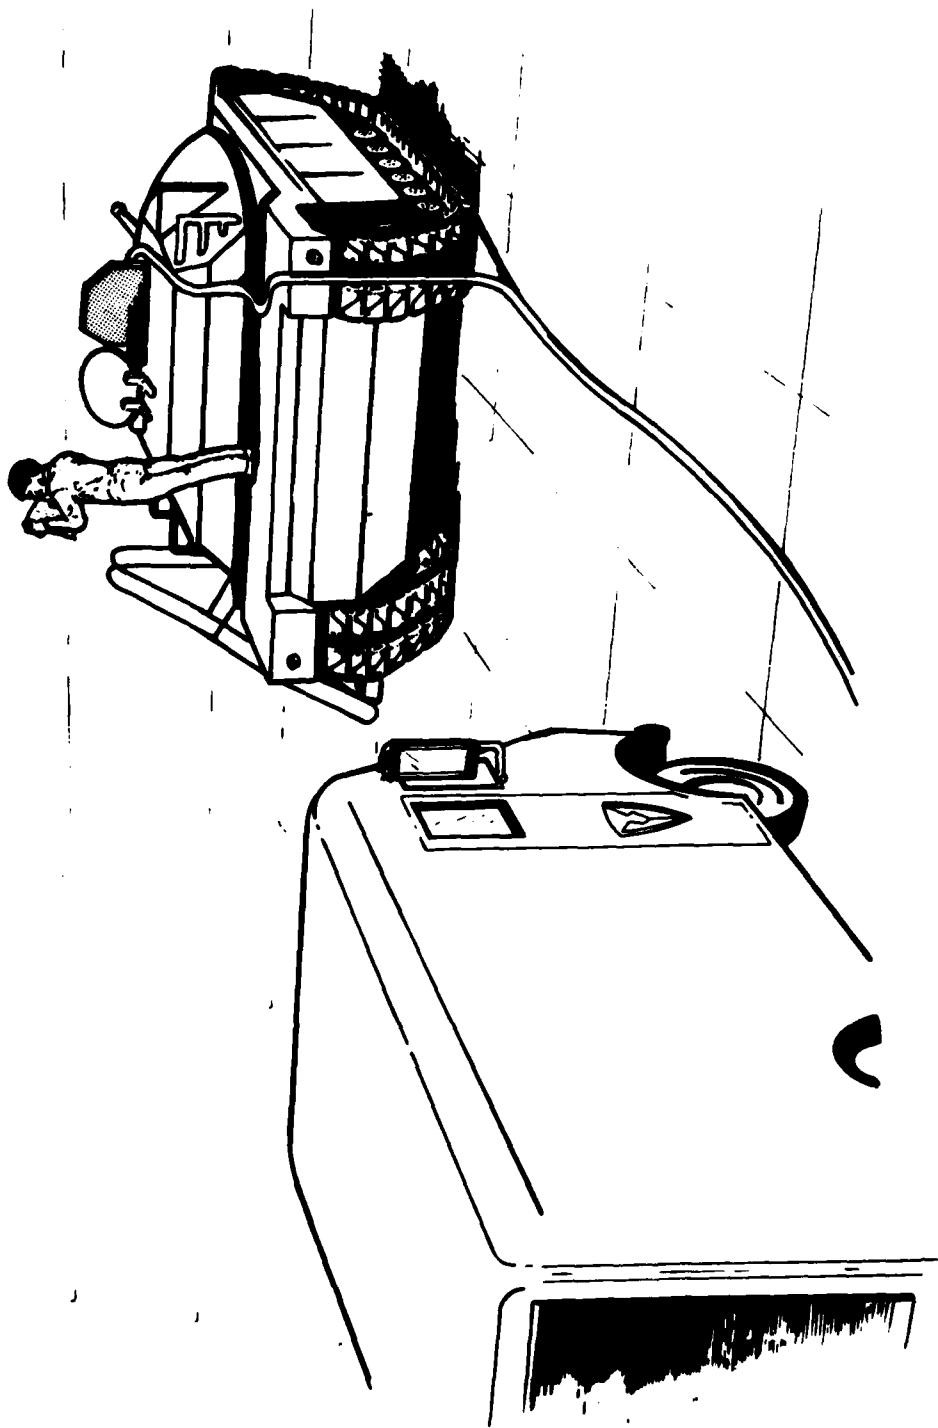

SOLUTION - TO IMPLEMENT NEW MATERIAL TRACK SHOES AND PINS, INVESTMENT CASTING AND HOT MOLDING TECHNIQUES WILL BE ESTABLISHED FOR METAL MATRIX COMPOSITES.

COMPONENT -- TREADS

(4010) TITLE - AUTOMATED ROADWHEEL TEST MACHINE

PROBLEM - KRAD HAS A LINE-STATION NON-AUTOMATED ROADWHEEL TEST MACHINE TO ASSURE CONFORMANCE TO ENDURANCE REQUIREMENTS AS SET FORTH BY MIL-N-3100C.

SOLUTION - AUTOMATE THE EXISTING SINGLE STATION AND ADD A SECOND AUTOMATED STATION. AUTOMATION OF BOTH STATIONS WOULD PRECLUDE THE CONTINUOUS PRESENCE OF A TECHNICIAN, RESULTING IN A COST REDUCTION.

TEST AND EVALUATION COMMAND
(TECOM)

US ARMY TEST AND EVALUATION COMMAND

(TECOM)

TECOM, with headquarters at Aberdeen Proving Ground, MD, is the primary developmental testing agency for the US Army. TECOM plans, conducts, and reports on development tests performed during the life cycle of Army materiel, and evaluates foreign materiel for possible US acquisition. Additional testing is performed as a service to the commodity commands upon their request. The testing organization consists of the aircraft development test activity, three environmental testing activities, five proving grounds (one of which serves as the third environmental activity), and a national missile range. Facilities are located in the continental United States, the Panama Canal Zone and Alaska.

Individual investigations into production test procedures and evaluation techniques are accomplished through TECOM's MMT program. In view of TECOM's mission and the intended results of the MMT efforts (to improve test procedures), the majority of the work is accomplished in-house.

TECOM's MMT efforts are grouped under two general headings: documentation and resource conservation. Individual efforts are funded from these "parent programs." Current funding constrains TECOM to an annual program that supports approximately one-half of their planned efforts.

US ARMY TROOP SUPPORT COMMAND

(TROSCOM)

The US Army Troop Support Command (TROSCOM), located in St. Louis, Missouri has a diverse mission to improve the Army's combat readiness. The scope of their work ranges from amphibious transportation and watercraft to field support items such as rations, clothing, generators, bridges, camouflage, mine detectors, air conditioners, water purifiers, heaters, fuel storage and distribution equipment, compasses, earthmoving equipment, body armor, and parachutes.

The Belvoir Research and Development Center (BRDC) located at Ft. Belvoir, Virginia is a subordinate element of TROSCOM. All of the planned projects in this year's TROSCOM plan originated at BRDC. Major problem areas confronting BRDC include:

a. Providing military bridges at moderate cost, which have high mobility and high emplacement speeds while retaining the ability to withstand the abusive treatment inherent in the battlefield environment. High strength, low density composite materials offer great promise for solutions to this problem. Increased production of high strength fiber materials has reduced materials cost. Techniques for the fabrication and installation of these materials into usable bridge components is the area in which large cost reductions are possible. The reduction of presently used labor intensive methods, through the application of automated processes, will reduce component costs. Initial design in these materials offer improved performance due to the flexibility possible in material configuration.

b. Combat vehicle deperming. Armored vehicles have a magnetic signature which is induced by various manufacturing operations. This signature makes them vulnerable to magnetic influence land mines. Several nations, including the USA, have mines fuzed in this manner. By exploiting and implementing the knowledge gained by our NATO Allies and the US Navy, a production facility for removing the magnetic signature will be designed and fabricated.

APPENDICES

ARMY MMT POINTS OF CONTACT

HQ, AMC

US Army Materiel Command
ATTN: AMCM/Mr. F. Michel
5001 Eisenhower Avenue
Alexandria, VA 22333

C: 202 274-8284/8298
AV: 284-8284/8298

AMCCOM

US Army Armament, Munitions & Chemical Command
ATTN: AMSMC-PBS-A (R)/Mr. Carroll Schumacher
Rock Island Arsenal
Rock Island, IL 61299

C: 309 794-3517/3665
AV: 793-3517/3665

US Army Armament, Munitions & Chemical Command
ATTN: AMSMC-PMP-P (D)/Mr. Donald J. Fischer
Dover, NJ 07801

C: 201 724-6092
AV: 880-6092

US Army Armament, Munitions & Chemical Command
Chemical Research and Development Center
ATTN: SMCCR-PMI/Mr. Joe Abbott
Building E5101
Aberdeen Proving Grounds, MD 21010

C: (301) 724-3418/3586
AV: 584-3418/3586/3010

AMETA

US Army Management Engineering Training Activity
ATTN: AMKOM-SE/Mr. Paul Wagner
Rock Island, IL 61299

C: 309 794-4041
AV: 793-4041

AMMRC

US Army Materials & Mechanics Research Center
ATTN: AMXMR-PP/Mr. John Gassner
Watertown, MA 02172

C: 617 923-5521
AV: 955-5521

AMRDL

US Army Applied Technology Laboratory
Army Research Technology Lab (AVSCOM)
ATTN: DAVDL-ATL-ATS/J. Waller
Fort Eustis, VA 23604

C: 804 878-5921/2401
AV: 927-5921/2401

AVSCOM

US Army Aviation Systems Command
ATTN: AMSAV-PEC/Mr. Fred Reed
4300 Goodfellow Blvd.
St. Louis, MO 63120

C: 314 263-3079/3080
AV: 693-3079/3080

CECOM

US Army Communications Electronics Command
ATTN: AMSEL-POD-P-G/Messrs. Feddeler,
Esposito, Resnic

C: 201 535-4926
AV: 995-4926

US Army Communications Electronics Command
ATTN: AMSEL-PC-SI-I/Mr. Leon Field
Fort Monmouth, NJ 07703

C: 201 532-4035
AV: 992-4995

AMC Intern Training Center

ATTN: AMXMC-ITC-E/Mr. Mickey Carter
Red River Army Depot
Texarkana, TX 75507

C: 214 838-2001
AV: 829-2001

Department of the Army

ODCSRDA
ATTN: DAMA-PPM-P/LTC S. Marsh
Room 3C400, The Pentagon
Washington, DC 20310

C: 202 695-0507
AV: 225-0506

DESCOM

US Army Depot System Command
ATTN: AMSDS-RM-EIT/Mr. Mike Ahearn
Chambersburg, PA 17201

C: 717 263-6591
AV: 238-6591

ERADCOM

US Army Electronics R&D Command
ATTN: AMDEL-PO-SP/Mr. Harold Garson
2800 Powder Mill Road
Adelphi, MD 20983

C: 202 394-3812
AV: 290-3812

HDL

Harry Diamond Laboratories
ATTN: DELHD-PO-P/Mr. Julius Hoke
2800 Powder Mill Road
Adelphi, MD 20783

C: 202 394-1551
AV: 290-1551

IBEA

US Army Industrial Base Engineering Activity
ATTN: AMXIB-MT/Mr. James Carstens
Rock Island, IL 61299

C: 309 794-5113
AV: 793-5113

MICOM

US Army Missile Command
ATTN: AMSMI-ET/Mr. Bobby Park
Redstone Arsenal, AL 35898

C: 205 876-2604
AV: 746-2604

MPBMA

US Army Munitions Production Base Modernization Agency
ATTN: SMCPCM-PBM-DP/Mr. Joseph Taglairino
Dover, NJ 07801

C: 201 724-6708
AV: 880-6708

RIA

Rock Island Arsenal
ATTN: SMCRI-ENM/Mr. J. W. McGarvey
Rock Island, IL 61299

C: 309 794-4142
AV: 793-4142

TACOM

US Army Tank-Automotive Command
ATTN: AMSTA-RCKM/Mr. Donald Cargo
Warren, MI 48090

C: 313 574-8709
AV: 786-8709

TECOM

US Army Test & Evaluation Command
ATTN: AMSTE-AD-M/Mr. William Deaver
Aberdeen Proving Ground, MD 21005

C: 301 278-3677
AV: 283-3677

TMDE

US Army Test Measurement Diagnostic Equipment Support Group
ATTN: AMXTM-S/Mr. Ken Magmant
Redstone Arsenal, AL 35898

C: 205 876-1850/2575
AV: 746-1850/2575

TROSCOM

US Army Troop Support Command
ATTN: AMSTR-PT/Mr. Richard Green
4300 Goodfellow Blvd.
St. Louis, MO 63120

C: 314 263-3353
AV: 693-3353

US Army Troop Support Command

Belvoir R&D Center
ATTN: STRBD-HE/Mr. K. K. Harris
Fort Belvoir, VA 22060

C: 703 664-5433
AV: 354-5433

US Army Troop Support Command

Natick R&D Center
ATTN: STRNC-EML/Mr. Dan DaLuz
Natick, MA 01760

C: 617 651-4883/4882
AV: 256-4883/4882

WVA

Watervliet Arsenal
ATTN: SMCWV-PPI/Mr. William Garber
Watervliet, NY 12189

C: 518 266-5319
AV: 974-5319
